X-Newsreader: Forte Free Agent 1.0.82

Hi, all. I'm still looking to buy a CED player with stereo and video line outputs. The SGT250 would do fine, I think.

Anyone have one they'd like to part with?

Neil - nw@ix.netcom.com

More from my collection of old Popular Science magazines:

>From the November 1979 "Look and Listen" -  
JVC updates VHD/AHD player

A new version of its VHD/AHD (high-density video and audio) disc system was unveiled by JVC in the U.S. several months ago. JVC's disc player uses a mechanical-contact stylus to play two-sided, two-hour video discs; hardware might be marketed next year. An optional adapter can be plugged into JVC's player, enabling it to play pulse-code-modulation (PCM) audio discs with extraordinarily high fidelity. (Magnavox's Magnavision optical-disc machine being sold in a few cities has a non-contact laser beam for signal readout and plays back only TV signals.)

JVC's latest player differs from the hardware shown in Japan last year primarily in the method of loading discs. Instead of loading discs on the turntable like a conventional record player, you now slide a heavy plastic sleeve holding a disc into the machine. The disc is automatically loaded on the turntable when the sleeve is withdrawn, and removed when the disc jacket is reinserted.

This prevents smudging of the smooth-surface, grooveless disc, which, unlike some mechanical systems, can provide features like random access and still frame (available on Magnavision players). RCA modified its similar video-disc player for automatic loading after home tests showed smudging from handling was a serious problem. RCA's video-only system, however, has been based on discs

with grooves, making the two systems incompatible. JVC, RCA, and other firms developing mechanical-type video-disc systems have been conducting talks, though, trying to establish a compatible standard. RCA has been buying software and gearing up for marketing its system, perhaps in 1980.

From: David Potochick  
To: ceds@teleport.com  
Subject: In Regard To Previous Anouncements....

The Sears CED player that I previously advertised here is now resting in a trash heap somewhere. I couldn't get it to work and got really fed up with it..... It was at a point where it wouldn't play any disks.... So I TRASHED it!! Oh.... I also recently just bought a Stereo RCA CED player for \$60. It came with a wireless remote and five movies. I found it at a resale shop. It's in mint condition and works Beautifully.....

STEREO CED Note:

I have the movie "Saturday Night Fever" in stereo. At the beginning of this movie, the left channel goes completely dead for about 30 seconds and then comes back. Does anyone else have this movie and the same problem?? The movie music also changes tempo at times.... It plays the same on both players I have. Is this a mastering problem???

Washing CED's

I agree with Tom Howe on the Distilled water issue for rinsing. I also agree that this should only be done when a CED works improperly or is covered in fingerprints or mud.

Tom Had a CED in his car??? Sheesh Tom..... you must be as much of a CED junkie as I am.... I thought I was bad..... I pick them up everywhere!!! However, I am getting more picky about what movies I purchase....

As far as CED's deteriorating from washing, I don't know if this happens... However, I will let everyone know the death date of the "Benji" CED that I washed.... if it does deteriorate.

More Later.....

Dave.

Greetings!

I'm looking for a belt for a Toshiba VP-100. If you have any ideas, let me know.

Also, does anyone know what the differences in the recording patterns of a CED and a LaserDisc? Looking at the surface of the disc, the patterns are pretty much identical (to the naked eye).

A CED STORY

I recently bought "THE HOWLING" on CED at an antique mall. But, "THE HOWLING" wasn't in the caddy. Instead, when I put it in my player, I saw the movie, "Savannah Smiles". I guess I should have checked the numbers on the disk and the caddy. But, I never saw this movie and I really enjoyed it. So I lucked out and retitled my CED caddy.

Be sure to check the number on the disk and the number on the caddy and see that they match.

Later,

Dave.

Still more from my collection of old Popular Science magazines -

>From the March, 1980, "Look and Listen" by John Free:

Quick Looks

IBM has joined forces with MCA and Japan's Pioneer to produce and market optical video-disc players. GM now has two-thirds of 10,000 players it ordered.

Latest entry to the video tape and disc software field is Warner Communications' WCI Home Video Inc. For 1980, it's planning 55 releases.

>From the May, 1980, "Look and Listen" by William J. Hawkins:

Quick Looks

The latest on video discs? Matsushita is dumping its groove-guided pressure pickup system and is joining with JVC to produce its Electro-Tracking Capacitance pickup system. This capacitance technique is designed to be inexpensive, like the RCA Groove-Guided Capacitance system, but grooveless, like the Philips-MCA Optical-Tracking pickup system, so special effects such as slow scan and

freeze-frame can be built in. Meanwhile, RCA has signed a deal with CBS for the manufacturing and distribution of SelectaVision discs. That should guarantee software availability when the machine is introduced in December.

Optical vs. mechanical:  
the coming battle of the

#### VIDEO-DISC PLAYERS

Several incompatible disc machines will  
tease the eager buyer next year.

---

by John Free

If you're confused by ads citing advantages of one video-\*tape\* machine over an incompatible competitor, brace yourself. More befuddlement is brewing. Early next year, makers of two--and perhaps three--mutually incompatible video-\*disc\* players will each be shouting the virtues of their products while cleverly knocking the others.

Battle lines between two differing disc technologies took shape in the early 1970's with demonstrations of early lab prototypes. Despite attempts at standardization, the lines hardened for two types of disc players. Optical, involving touchless disc playback with a laser beam, and mechanical systems, requiring contact between the disc and pickup stylus.

Proponents of the mechanical system point out the basic simplicity of their approach and its low costs for mass marketing. Those favoring optical systems stress the no-wear advantages of laser-beam playback. (Lasers last over 10,000 hours.) Proponents of the optical

route also say that mass production of optics and a switch to solid-state lasers will cut prices.

Pictures I've seen from the newest Pioneer, Magnavox, and RCA players are all amazingly detailed and noise-free. What follows should help delineate the differences between these players.

#### Optical machines: laser playback

Two optical video-disc players, made by Japan's Universal Pioneer Corp. and by Magnavox here, are being test-marketed in a limited number of cities. Magnavox plans nationwide sales this year, Pioneer next year. The machines play compatible 12-inch discs by bouncing a focused laser beam from a spiral track of microscopic pits etched on the disc's reflective surface. A clear plastic coating makes the disc immune to dust and smudges from handling. Two types of discs are sold: Those with a half hour per side of programming play at 1800 rpm. Player controls enable you to freeze a TV picture, quickly scan a disc, play forward and reverse slow motion, or pick a specific TV frame by displaying its number on the screen. Pioneer's VP-1000 player and remote control have a numbered key pad for direct frame-number selection; Magnavox's Magnavision requires scanning to the desired frame. Hour-per-side discs have more than one TV frame on each circular track, so freeze-frame and related features will not work. (Playback rpm gradually changes from inner to outer tracks.) Both players have output jacks for optional stereo hi-fi (or dual-language tracks). Pioneer Artists Inc. and other new software firms will provide a stream of stereo/video music performances. Also, movie makers plan to release films to theaters and for discs almost simultaneously. Discs cost from \$6 to \$25. Both players, with minor variations, have laser-based optics to play discs standardized by Philips and MCA. A beam from a laser is deflected by a prism and mirrors through a lens onto the disc. Metal between pits flashes light back to a photodetector for conversion to an electronic TV signal. The entire mechanism moves radially on a slide linked to the electronic servo circuits that control its movement.

[Caption of accompanying photo/diagram: Feature-packed \$749 Pioneer machine has an optional \$50 remote control. Player accepts a plug-in option for future digital audio discs.]

#### RCA: grooved capacitance disc

RCA's SelectaVision video-disc player has been completely overhauled since it was introduced and field-tested several years ago. The basic playback principle is unchanged: A stylus electrode, replaced every two or three years, senses the TV signal as electrical capacitance variations in disc grooves spinning at 450 rpm. Playing time was boosted to one hour per 12-inch disc side by doubling disc grooves to just under 10,000 per inch. Home tests showed that dust and other groove contaminants from handling messed up pictures. So, RCA's

improved SelectaVision has sealed disc "caddies." Slip the caddy into a player slot and the disc is loaded automatically. This contact-free, sealed-player approach sharply reduces groove contamination. Spiral grooves, with four TV frames per revolution, do not permit freeze-frame and similar features now. These operating features may go into future step-up models using electronic memories to store images. Two fast-search buttons, though, let you jump the stylus forward or back to quickly locate a scene visually. Also, two other search buttons move the tone arm and display its position as time on digital readouts. RCA does not plan to include stereo hi-fi capability on its initial model, slated for nationwide marketing early next year. The player's simple construction, plus many microcircuits, should keep RCA's price under \$500. Discs will be \$15 to \$20, depending on content. RCA's low-cost approach has gained powerful allies: Zenith and undoubtedly other TV firms will market or make Selecta-Visions. CBS Inc. will help expand disc titles from 150 to 300 in the first year. Programs from several film companies range from classics, musicals, current films, and how-to, to TV series such as "Star Trek" (10 episodes) and "Victory at Sea" (a 90-minute version), and "Heidi" and "Hans Brinker" for children.

[Caption of accompanying photo/diagram: Metal-backed diamond stylus forms electronic circuit to convert minute capacitance variations in grooves into TV pictures. Compact, microcomputer-controlled player has viewing window.]

JVC: grooveless capacitance disc

Victor Company of Japan (or JVC here) rolled out a disc system in 1978 that combines the low-cost aspects of SelectaVision with the operating options--freeze-frame, slow-motion, etc.--of optical machines. Not only that, JVC included options for a super-hi-fi audio disc. It calls the whole package its VHD/AHD system (video and audio high density). Matsushita, Victor's parent firm in Japan, could offer VHD/AHD through its Panasonic and Quasar subsidiaries. An announcement about marketing is expected this summer. VHD/AHD hour-per-side discs are just over 10 inches in diameter and rotate at 900 rpm. Signals are stored as capacitance variations, produced by minute pits in the conductive plastic. The stylus rests over several spiral tracks, distributing pressure and minimizing wear. (Stylus life is 2000 hours, roughly 10 times RCA's.) But the metal stylus electrode "reads" just one information track and the tracking signals on either side of it. These tracking signals keep the stylus on the right path by feeding current to a coil/magnet combination on the arm, which can move sideways. The cantilever arm can also be stretched or shortened instantly to correct for speed variations (time-base errors). Signals sent to coils can be used to make the stylus replay one frame continuously, move ahead or back at slow speed, etc. JVC has also demonstrated an optional random-access unit with a wireless remote control for the main VHD/AHD player. It has memories and numbered key pads for pre-

programmed display of selected TV frames. Another plug-in option unscrambles digitally coded audio discs that have a dynamic range over 90 dB and other super-fidelity specifications. At this writing, JVC has not revealed video software sources needed to sell its system successfully. Europe's Thorn-EMI Ltd., though, has agreed to produce both players and software.

[Caption of accompanying photo/diagram: Prototype player has slot for loading discs from JVC's sealed caddies. The stylus, which can be electromechanically maneuvered, wears down along its entire length for long life.]

Subject: VP1000 weak audio output  
Date: Mon, 13 Jan 1997 04:04:30 GMT

My brother just bought a Zenith VP1000 and about 20 discs at a flea market. The player works okay, but the sound output is very low. He says he really has to crank up the volume on his TV.

The SGT100 I bought a while back is even worse, though it has a bad picture to boot. Still, I wonder if its inherent in the CED format that the audio is weak, or is it indicative of a problem with our players?

Alas, Tom, there was no manual with the VP1000.

Subject: RE:CED Digest Vol. 2 No. 2

Hi Tom,

We were always told that a CED could only have 60 minutes of programming per side, but Major Dundee clocks at over 61 minutes on side one. Since the title was released towards the end of production, I have always wondered if this was the result of improved technology, or whether CEDs always had the capacity for more than 60 minutes of programming (and were there some 2 disk sets that actually could have been issued on a single disk). So I thought I'd throw the question out: "Anyone else know of any disks that had more than 60 minutes of programming on one side?".

Subject: RE: Toshiba Turntable Drive Belt

For the past year, I've been trying to find original, unused rubber belts for Toshiba, Hitachi, and Sanyo players to take precise measurements off. This would be for the "CED Player Belt Replacement Guide" I'm working on. These don't appear to be available anywhere, so I may have to finish the guide based on approximations. But the good news is that most of the belts were off-the-shelf designs, so it's just a matter of getting a substitute belt close enough to the original to work.

Regarding the Toshiba Turntable Drive Belt (also used in the Wards and Elmo OEM knockoffs), if the belt is merely falling off, it may simply be installed insideout. The turntable motor pulley in the Toshiba player is unflanged, and at first thought one might wonder how the belt ever stays on it at all. What keeps it in place is the natural "curl" of the flat rubber belt where the belt has a tendency when pinched to curl in one direction or the other. Toshiba put a white mark on the outside of their belts, so the belt should be installed with this facing out. If the belt is broken or stretched to the point that it no longer fits, then a belt close in size to the original will work. The drive path in the Toshiba player is 31" and design convention dictates a belt 5 to 10% smaller in circumference. Therefore a flat rubber belt 28" to 30" in circumference with a width of 0.3125" should work. The width is important, since narrower belts may not have enough curl to keep them on the motor pulley. You may be able to find a local supplier for this size belt by checking in the phone directory under "Electronic Equipment- Service & Repair" .

Since the laser format actually predated the CED format by a few  
years, you should be looking for laser titles from about '79 through  
'86 as well. I too am curious if such a listing exists.

FWIW, I have several of the older Pioneer Artists 8-inch laser discs:  
Pointer Sisters, So Excited, 7 songs, 30 min., 1986  
Martin Briley, Dangerous Moments, 3 songs, 14 min., 1985  
Heart, 4 songs, 17 min., 1986  
an older 12-inch laser disc:  
MTV Closet Classics, 14 songs, 60 min., 1986  
and a newer MCA 8-inch laser disc:  
Spinal Tap, Break Like the Wind, 3 songs, 13 min., 1992

In CED, I have the prized "rockumentary" about The Who, "The Kids Are  
Alright." I was told this was the first ever stereo CED. Can anyone  
confirm this?

More from the vaults of Popular Science.

>From the November 1980 "Look and Listen" by John Free -

Video-disc Update

Another combatant in the coming 1981 battle over video discs may be

General Electric. GE announced just before the electronics show [CES in Chicago - ed.] that it's discussing a joint venture with Japan's Matsushita and JVC and England's Thorn EMI Ltd. to market the VHD (video high density) disc system and its software (programming). The VHD system was demonstrated at the Consumer Electronics Show by Panasonic and JVC, both Matsushita subsidiaries. The giant Japanese firm says it may have VHD players on the market by late 1981. They would be priced to compete with RCA's under-\$500 SelectaVision disc player, slated for introduction early in 1981. RCA recently dubbed its system CED, for Capacitance Electronic Disc; it will also be sold by Sears Roebuck.

Both the CED and VHD systems sense TV signals encoded as capacitance variations in discs when a stylus contacts the disc surface. But discs for one system are not compatible with the other. Magnavox and Pioneer both expect to market their optical systems (\$700-\$750) nationwide next year, too. Optical discs, played back by a laser beam, are compatible between the Pioneer and Magnavox players.

>From the June 1981 "What's New in Electronics" -

CED Videodisc

Insert a CED videodisc into this Hitachi VIP-1000 player and enjoy the show for the next two hours. Buttons control two fast-forward and reverse speeds, pause, and still framing. The \$500 player has connections for audio, video, or RF output and for optional remote control. [A small picture of the player accompanies the article.]

Subject: Checking CED Numbers & Etc.....

I usually just put my car key in the slot of the CED and open it in a store.... This is fast for me.... Then I make sure that the number on the disk matches the number on the caddy.... Now I do that more than before....

UPDATE ON WASHING DISCS.....

The Benji CED that I washed is still working fine.....

-WARPED DISCS-

I recently bought Cheech And Chongs "Nice Dreams".... When I got it home, I found out that it was a little too warped to play properly.... Does anyone know a good way to flatten CED's???? I really don't want to end up damaging this movie.....

Later,

Dave.

Subject: FORWARDED TO CED DIGEST FROM ALT.VIDEO.LASERDISC

Subject: Original VideoDisc Dates Back to 1927  
From: Tom Howe  
Date: 1997/01/19  
Distribution: world  
Content-Type: text/plain; charset=ISO-8859-1

Rod Stewart: Live at the Los Angeles Forum\*  
Eubie!\*  
Paul McCartney & Wings Rockshow\*

The above titles are listed in stock number order, which may or may not reflect the order in which they were pressed at the factory. The first two titles are movies with the stock number starting with 10, while the last six are musical performances with the stock number starting with 12. The CED title "The Kids are Alright" was an early stereo title, but wasn't released until a couple months after the above in July 1982.

Another question that comes up is, What was the first ever VideoDisc? Like the above, there were a number of titles available for purchase at the CED launch in March 1981, as RCA had spent most of 1980 and early 1981 pressing a warehouse full of discs for the nationwide launch. But according to the publication RCA Engineer the first production title mastered was "Race for Your Life, Charlie Brown", which curiously enough isn't even close to having the lowest numerical stock number. If you look at this title, you may notice the rainbow-style label pattern. Other titles with this rainbow pattern like "The Love Bug" and "The Philadelphia Story" may be among the first titles pressed, as this would make sense from a manufacturing standpoint.

Question: What were ALL of the first CED titles that were available at the launch?  
Also, I've been told the 2 very last CED's were Youngblood and Enemy Mine.

Tom Howe:

You recently answered an inquiry on the first stereo and first ever CED discs

pressed/released. What about the last??? What titles were the last ones pressed by RCA and what month and year did they arrive??? I have a "Return of the Jedi" that I've been told was pretty near the end of CED.

Thanks,

Tony

Not a very big last issue..... So, I thought that I would at least send something to add to the next CED Digest.....

-CED Do's and Don'ts-

Do not try to substitute vaseline or toothpaste for the CED disk lubricant.... This can cause a very big mess.

Do not allow your weird friends to take the top off of your CED player and say things like,"OOOHH, NEAT!!!"

Do be sure to take a plastic wrap off of your CED movie before putting it into your player.....

Do not try to play discs that are warped or cracked... However, sometimes this is hard to determine..... Not many people know how to open a CED case.

Do not forget to eject a CED before turning off the player.... Sometimes the turntable keeps running....

Do not leave the caddy in the player while it is being ejected from the motorized loading models....

Do not try to play 45 rpm records inside of your CED player.... On the same note, Do not try to play a CED on a phonograph....

Do not try to put a laser disc in a CED player....

Do not try to put a CED in a Laserdisc player....

Do not try to put a 1927 phonovision disc in a CED player....

(All of this is from experience..... Really... I'm not joking....)

Overall..... Do enjoy your CED Player!!!

More from my old Popular Science magazines. This'll be the last of these for a while until I can page through the remainder of my collection 1700 miles away in the Chicago area.

A short snippet taken from a longer article entitled "Home Electronics: Currents for the 80's" by Arthur Fisher, published in the November 1980 issue of P.S.

"The video-disc player, with prerecorded films and other programming at a much lower price [than video tapes, then - Ed.], has only just begun to appear. Yet, the FCC projects, 'disc player sales are expected to surpass VCR sales within five years.' Regrettably, the disc player outlook is also counoded by a variety of competing, incompatible systems."

Dave,

I have the same unit, and the same problem with audio missing. Right now, my unit is on the engineering bench at the television station where I work. If they can find the problem, I will report back here!

Dave,

I'm sad to report the engineers gave a through check-out on my RCA SGT 100 CED  
disk player. The engineer left a note...

"There is a carrier at 4.5 mhz above visual, but no audio on it. I checked  
around on the board and never did find any audio."

What, exactly, is the scheme for audio recording on the disk? Anyone care to  
speak technically about it?

Subject: CED Digest Vol. 2 No. 6 -Reply

I'm looking for "TRON" on CED... Let me know if anyone has one that  
they'd like to sell.....

Other CED Stuff.....

I liked the orange letterbox at the beginning of Cheech & Chongs "Up In  
Smoke" CED ... I think they should have done the whole movie in the  
orange letterbox....

Are parts of a movie ever taken out of a CED to compensate for time???

It seems to me that certain parts of "Raiders Of The Lost Ark" are  
missing... On the same note, I hate how they edited "Close Encounters  
Special Edition" on Laser Disc. The whole part about building the  
mountain in the house was taken out.....

How hard is it to break a needle on a CED player??? I've played some  
pretty awful looking CED movies and I still haven't broken a needle... I'm  
amazed that I havent..... Has anyone had a needle break yet??? What

happens when a needle does break or wear out????

More Later....

Dave.

Tom,

Have a small question about the skt-400? I'm wondering about the reject mode on the 400's. How is the action suppose to properly be carried out? Sometimes (depending on what I don't know?) it will come to a slow percise slowdown with the platter and disc gradually, and some other times it will "more aburtply" come to a more suddenly stop and then you can here the friction and sliding of the disc upon the platter itself. It will do this more so, when you press the reject button also. Is there a point where you should wait to reject or "is there a danger to this happening where it could be scarring the disc in the machine???"

Subject: The Very Last VideoDisc

A manager who was still working at the pressing plant when it closed on June 27, 1986 told me the last title released was "Jewel of the Nile". Several of these were framed for distribution among the management staff with the legend "This Last RCA VideoDisc Produced Is Dedicated To ..... 1986" . This is the only 1986 title I've seen that isn't listed on any of RCA's impending release bulletins, so the decision to press it must have been a last minute thing. It doesn't seem to be an extremely rare title, which is odd, because how did people become aware of its existence to buy it? Perhaps RCA sent out an announcement to their dealer network stating this was the final title available. The ones I've seen also have two labels glued directly over each other on the caddy, so RCA must have been gathering up all their miscellaneous caddies when this was pressed.

To: ceds@teleport.com  
Subject: RE: 60 Minute Limit and Shortened Media

Recent questions were about exceptions to RCA's 60 minutes per side limit and whether some media was shortened to get it on a single disc. RCA actually raised the 60 minute limit per side to 63 minutes in 1983 after the introduction of the J-series players. Some long discs will enter locked groove around 61 minutes on the early players designed before this longer play time was instituted. The test

discs have 65 minutes of video per side to test arm travel limit, and the longest side I've seen on a released title is Side 2 of "My Dinner with Andre" where the movie ends at 55:51 followed by the trailers for "Koyaanisqatsi" and several other movies until it finally ends at 62:12.

Elimination of end credits and time compression were two methods used to get movies longer than 120 minutes on a single disc. Examples of time compression are "Star Wars" and "The Empire Strikes Back" which were respectively shortened by 3 minutes and 5 minutes by speeding up the 1" recording tape during mastering. I'm not aware of any discs with cut scenes, but haven't investigated whether this is the case with "Raiders of the Lost Ark" or any other titles.

From: Jesse Skeen  
To: Tom Howe <ceds@teleport.com>  
Subject: Re: CED Digest Vol. 2 No. 7  
Mime-Version: 1.0

I know that an early practice with both CED and laserdiscs, and even a few tapes, was to "time-compress" movies that ran slightly over the allotted time, 2 hours in discs' case. This meant the movie was run at a slightly faster speed, "Star Wars" runs about 121 minutes so the CED and first laserdisc versions were done this way, the letterbox reissue on laserdisc is on 2 discs so it won't be time compressed. Empire Strikes Back is very obviously time-compressed, you can tell just by the opening music! I have heard a few movies were slightly edited to fit on one disc, usually brief scenes where nothing really happens, like when they show someone getting out of a car or walking into a room. They told me they did this with "Saturday Night Fever" but I haven't run my tape along with it to see if this is true or not (I also have the laserdisc which has the end of the credits shortened!) The most recent letterboxed laserdisc of Raiders of the Lost Ark is a single disc, and my old tape is on a T-120 so I don't think it ever ran over 2 hours. I read somewhere the original VHS tape of Superman: The Movie was horribly time-compressed to fit on the longest available tape at the time, that must have been something to see! I also heard that the first Thorn/EMI VHS tape of The Terminator was time-compressed to fit onto a T-105 length tape, I don't know if this is true either. Thankfully video companies have seemed to stop this deplorable practice, especially since laserdisc started being marketed as the "purist" format. I think HBO still does this to fit movies into even-amounted time slots however, but they do so much stuff with their movies now that there's simply no point in subscribing to them at all. Opening credits on a lot of old videos were letterboxed to fit onto the screen, and had often interesting borders. Besides the orange on Up in Smoke, 3 Days Of The Condor has a funny 70's line design, The Dark Crystal has a weird medieval pattern, and others have other colored borders. Again, thankfully almost every current laserdisc release is entirely in letterbox format, I often watch my old CEDs JUST to watch how bad the pan and scan is!

I've never worn out a needle (but fear the day I do), I've tested a few that produce a snowy picture however so this is probably what happens. I

have however had 2 stylus cartridges short out on me, once on my Sears/Hitachi player which uses the funny long thin cartridges, and once on my SGT 250, which uses the more common large cartridges, this was when I was watching for the first time a disc I had gotten new in the shrinkwrap! Both times, the sound and picture appeared to "freeze" for a second (more often experienced on old early-80's laserdiscs, the sound effect is also similar to a CD stuck on one part, repeating the same fraction of a second over and over.) After this the sound and picture dropped out entirely into a series of white horizontal lines on the screen. I often hit Pause for a second when strange problems come up and that seems to cure it, but these times the player would not do anything else after I tried to return to play mode, playing other discs brought nothing.

New question: Does anyone know of any program material that is available ONLY on CED? Besides the opening RCA logos, and instore demos, I have a few discs that I haven't seen on any other formats. The NFL highlight discs are actually each composed of 4 separate films that look like they were distributed on 16mm film. I just got the Wimbledon 79/80 disc this week, and that also appears to be taken from different 16mm films (I haven't watched all of it yet.) I don't think the 1980 Olympics "Miracle of Lake Placid" disc is available anywhere else either. One of my favorite CEDs, and among the first load I ever picked up, is Family Entertainment Playhouse, which is 4 Learning Corporation of America 16mm films shown in schools telling "stories with a message". The "Mr. Gimme" film is especially hilarious! I have an animated Hansel and Gretel full-length movie done with animated figures, made in the 1950's and put on disc by RCA, which I have not even seen listed in any video movie guides, so this film may be pretty rare too. The MysteryDisc interactive discs were originally produced for laserdisc, but "A Week At The Races" was made for CED (I like how the old guy on it says the word "videodisc"). Although Jane Fonda's Workout started as an RCA Videodiscs production, it's still available on VHS, and I have seen Dr. Spock's "Caring for your Newborn" on VHS as well.

One final note, I just saw a DVD player at the Good Guys yesterday, all they had was a Panasonic demo disc, there aren't any movies out for it yet. The claims of "Superior to laserdisc" are as false as the first RCA promo's claim of it having "clear, beautiful pictures." The demo disc includes a slow camera pan across the front of the player, with shadows on it that have that awful "pixelated" appearance that has plagued every other digital video format I've seen. It doesn't look as awful as DSS but it is still completely unacceptable and I will never give up my laserdiscs for it. I do look forward to DVD's becoming an even bigger failure than CED, then I can get a \$10 DVD player at a thrift store and watch the demo disc at home and laugh at it all the time.

Hi there,

Just wondering if anyone has any advice. I recently bought a new stylus and cartridge from a place called FOX, but I still get a slightly snowy picture. Is this normal? Shouldn't the picture "rival VHS" or is this not true? I was really expecting a dramatic improvement in my picture quality when I replaced the worn stylus... I had made tapes from some CED's 10 years ago that look better than what the machine does now with the new stylus so I know it played better at one time. Do I have to adjust something? Is it just the age of my machine? Any suggestions would be appreciated.

Thanks,

Jim

I have about 750 titles and a dozen machines. As with so many others I felt these items would become scarce collectibles very rapidly. I failed to anticipate the inordinate storage requirements and the wifely wrath that could ensue from such an undertaking. In any event, I am ready to add to the collection and would like to hear from others with discs or machines to sell.

Tom,

Just sending along a good old fashioned thank you for the RCA Selectavision Home site page. It's really doing well. I figured I would sent a note of appreciation for it. Its often esay to take something like this for granted sometimes. It has been a real help in keeping us informed and focused on how to keep a lot of this stuff in some sort of context.

Mark.....

Tom -

A question for the list:

Does anyone know why The Outlaw Josey Wales was not produced in CED format?

I'm sure there are many titles that would seem like obvious inclusions in the CED catalog that are missing, but that is one I thought of recently that I thought it odd not to be included.

Were some movies rights not given to RCA or CBS or whoever produced the disks?

To: ceds@teleport.com  
Subject: RE: Failure of Turntable to Spin Down Properly

Hello:

A recent question concerned "Why does the turntable in my SKT400 spin down at variable rates?" This response addresses turntable spin down in general. Since the turntable has to go from 450rpm to a complete stop in a few seconds, a braking mechanism is employed. In all belt-driven turntables this is a

mechanical friction system, and in all direct drive turntables (except the Sanyo VDR3000), braking is achieved by reversal of the drive coil magnetic fields. Failure of the turntable to spin down in a timely fashion could be due to a weak mechanical friction system, or in the case of reversed coil braking, could be due to increased friction in the turntable mechanism. At first though this seems contradictory, since increased friction halts motion more rapidly, but remember that increased friction also generates more heat, and heat destroys magnetic fields. While a disc is being played, the Hall Effect transducers near the magnetic ring on the turntable create feedback that forces the mechanism to spin the turntable at 450rpm. If there is excessive friction, the magnetic coils draw more current to maintain the rate, which in turn produces more heat, requiring even more current, etc. At the end of play, this excessive heat causes the spin down phase to take longer.

Here are areas to look at to eliminate excess friction:

- (1) Turntable height-- needs to be high enough so there is no friction with the surrounding base.
- (2) Turntable warpage-- Never hit a CED player while the turntable is spinning. The turntable is very susceptible to damage from the impact while its spinning. The reason I mention this is that I've seen CED players (and computer hard drives, for that matter) that won't spin up unless first given a tap. In the case of CED players this "stiction" condition is often caused by a turntable shaft that was mistakenly greased (see item 4).
- (3) Missing Thrust Plate-- J and K players have a small 1/4" plate under the turntable shaft that is often missing. Sometimes a missing plate can be found attached to the turntable magnetic ring, since it fell out during a previous turntable removal and was drawn to the ring.
- (4) No Lubrication-- The turntable shaft should be lightly lubricated with sewing machine oil. Avoid using motor oils (too thick and detergent content), as well as 3-In-1 Oil (vegetable oil content).

Even in the absence of excessive friction, the rate at which the turntable spins down varies slightly each time the reject or unload button is pushed. This is because coil reversal can be initiated in any one of four states depending upon the particular instant the button is pushed. It's preferable to allow the player to initiate the reject sequence at the end of play, but in any case, the raised outer rim of the disc protects the grooves, and with Hitachi players, the small diameter turntable only contacts the raised center section of the disc.

Subject: An oddball model - SGT101

I have the instruction manual (only) for an RCA CED player identified as the SGT101. As best I can tell it's identical to the SGT100, but page

14 (where the warranty would appear) is entirely blank, even though page 12 refers to "...page 14 for information regarding warranty coverage.) RCA has long been known to make special models for distribution in different channels, so I don't know whether this player was intended for a particular store chain or for non-retail distribution.

(The way I got this manual was unusual -- an RCA rep gave several copies to a regular dealer, who set them out mistakenly thinking they were brochures. The booklet does \*not\* say "instruction manual" or the like on the cover, so that was an easy mistake, but I can't figure out how quantities of this booklet ended up being sent out to the sales force.)

Okay, so like I got this Return of the Jedi on CED (both parts). Part 2 plays great, however the same cannot be said for the first disc. When I took the disc out to inspect it, I noticed FINGERPRINTS on the surface of the disc, both sides. Well, so much for that, I thought.

Well, after noticing messages on here from people cleaning discs, I decided to do the same, using liquid hand soap, and using some foam swabs (used for cleaning tape heads. Then I decided to take the deal a step further...since the discs originally were sprayed with silicone (to reduce wear), I bought a can of aerosol silicon spray lubricant (valvoline brand) and sprayed the surface of the disc. WHOOPS! It comes out pretty thick. <grin> Anyways, I wiped the surface of the disc down (with a less than lint free cloth) and played the disc. It skipped a lot. Took it back out of the jacket, yep, lots of fibers from where I wiped it...plus there was still a lot of lubricant on the disc. So, I took the disc to the bathtub and turned the cold water on fairly hard, figured I could just spray the fibers off. That got rid of some of the contamination. Anyways, subsequent plays show that the picture is improving, it skips less than when I started, and the silicone spray has no ill effects on the program material.

I think where I went wrong was using a non lint-free cloth. I think that perhaps using a chamois would be a better idea...

Just thought you guys would like to know about the silicone spray thing. :)

\*Geoff!\*

Subject: CED Test Equipment

In a trade I received some items for CED testing that I am not familiar with . I have two Stereo/Mono Service Alignment Disc, # 153394. I assume these discs are used with other test equipment for setting up your players. I also received two small tools in RCA boxes one is a 159251 labeled Tool. The other is a 156529 labeled Gauge. If anyone has any information or comments on these tools I would appreciate their response. Billy New

I just bought a machine (sears brand) and about 50 ceds. I'm really just interested in war movies. Here is a list of the movies i could easily get rid of:

SUPER MAN II  
TENTACLES  
OKLAHOMA  
SUNSET BLVD  
SINGIN IN THE RAIN  
TREASURE OF THE FOUR CROWNS  
BRIGADOON  
A FUNNY THING HAPPEN ON THE WAY TO THE FORUM  
JANE FONDA'S WORKOUT  
BEING THERE  
TOOTSIE  
THE GREATEST SHOW ON EARTH  
WRESTLING IIUSTRATED'S "LORDS OF THE RINGS" (PRO WRESTLING)  
NINOTCHKA  
HEAVEN CAN WAIT  
"THE ORIGINAL CLASSIC VERSION" INVASION OF THE BODY SNATCHERS  
YELLOWBEARD

Subject: CED frequency question

Hi!

I live in Sweden and since we have a different mains voltage and  
frequence, I would like to ask what CED players use the mains frequency  
for internal timing purposes and what players do not. It is very easy to  
fix the voltage incompatibility but the frequency...

Would be very happy if I could get some answers, and if you do have a  
CED player (without mains frequency dependancy) to sell... please  
contact me!

Thanks,

Rikard <<mailto:rlj@algonet.se>>

My SJT 400 has a tendency to start playing anywhere from 40 to 120 seconds after  
programming for the side has begun. It I try to backtrack to the beginning of  
the disk, it won't go back any farther than it's original starting point (ie it  
will not go back to the real start of the disk). Sometimes if I reload a disk

it will start where it is sposed to, sometimes not. Does anybody know what causes this problem and how I can get it fixed?

From: Tom Howe  
To: ceds@teleport.com  
Subject: RE: SGT101 and SJT101 Players

The SGT101 was a demonstration model distributed to RCA dealers, which accounts for the missing warranty info in the owner's manual. There may have been some instances of these players being sold to customers anyways, since the SJT101 has "Demonstination Model" embossed on the facing.

Subject: 16th Anniversary of CED Introduction

Greetings All:

It was 16 years ago on Sunday, March 22, 1981 that RCA introduced the CED system at 5000 dealerships nationwide. Its interesting that this coming Monday is a major intro date for DVD, when Warner introduces the first large batch of DVD titles. DVD will be advertised at the Academy Awards on Monday. Does anyone know if RCA promoted CED during the 1981 Academy Awards (broadcast March 31, 1981)? There will be an RCA-brand DVD player which can be seen at this URL:

<http://www.rca-electronics.com/innovations/dvd.asp>

That website also has "The RCA Story", a history of the company and brand name from the late 19th century to present. They breeze through the 1980's without one mention of CED.

Subject: technical problem

My SFT100 W seems to be giving me a little problem that I cant quite figure out. The picture lately has had some static in it, and quite a few skips. So I figure my stylus is worn down. I order a brand new one, and though the picture doesnt seem to skip much, there is still quite a bit of static on the screen. Is there anything else I should check out? I have a ton of things hooked up to the tv, and I am going to try hooking it up "clean" to another TV without any other stuff plugged through it, to see if

something else might be interfering with the picture.

From: (Neil Wagner)  
To: ceds@teleport.com  
Subject: Wobbly platter  
Date: Sat, 05 Apr 1997 12:37:10 GMT

So I have this CED player (SJT200) that makes a lot of noise while it's playing, and I can look with the top cover off and see the platter that the disc sits on is wobbling something fierce. It's like it's out of balance, but it \*looks\* more like it really is wobbling - that is, relative to the stylus, the disc is moving up and down very quickly as it passes by, as if the shaft of the platter were too small for the hole in which it sits. Overall, the discs I have play okay, usually with a brief A/V glitch every minute or so, and sometimes the noise the player makes evens out, and becomes quiet for a few minutes, then will go right back to being real noisy.

What's an easy/best way to fix this? As an aside, what is the spec height of the platter (adjustable on my model)?

Neil - nw@ix.netcom.com

Priority: normal

Questions and news for the mailing list:

I've come across a guy who has the leftovers from a rental store that carried CED discs. For a list of the discs I have for sale or trade, please check my web page at:

<http://users.hub.ofthe.net/~zachd/flea/zach/ced/sale.htm>

I can also send you all have/want/pickup lists via email if you don't do WWW.

He also has quite a few model SJT-90 players. They are a very basic RCA model player with the tan tops and square faces and minimal features. If anyone is interested in a spare player (or two) let me know. I'd like to sell them 1 for \$10, or 2 for \$16 each plus shipping.

Here is a question for the list. I'm also picking up some spare parts. They are in the RCA boxes, so they have part numbers on them. Does anyone know if these are just for the 90 series players, or if they will replace parts on other models as well?

Here are some of the parts he has.

154216 - Stylus  
157928 - Circuit  
157862 - Cover  
157563 - Gear  
157550 - Bracket  
155884 - Integrated Circuit  
154243 - Motor  
830022 - REsistors  
157538 - Actuator

If anyone is interested in those parts, I'll be selling those also. He had quite a few styluses/needles! I hope they are compatible with other model machines.

That's all!  
Thanks  
Zachd@hub.ofthe.net

Subject: Gobbledegook

Gee, not much happening here recently. Did all the CED collectors leave with the Hale Bopp or what??? I usually see all kinds of stuff and the last two volumes were sort of short.

I recently bought the "Paul McCartney - Rock Show" CED. I still can't believe that this was a movie that was shown in theatres and elsewhere in the seventies. Didn't we have anything better to do??? While watching this, I realized that we must have had a whole lot more time on our hands to do things in those days. I enjoyed rock show but it really seemed to drag on and on.....

Other than that... I really have nothing new to report. The Benji CED is still playing without the special silicon lubricant.... Neither of my CED players have died yet.... Keep faith in the CED....

Later,

Dave.

Perhaps Tom Howe can shed some light on exactly what "circuit,"

"gear," etc., that we're dealing with here.

Here's an interesting story of what I found at the flea market yesterday. One of the large indoor spaces had a bunch of CED's stacked on a table, plus there was an old Zenith TV with a player actually hooked up to it and playing! There was a stereo in the building playing a radio station, I wanted to ask them to hook the CED player up to it! Out of a ton of discs (lots of good titles) I only found one I didn't have already, Monty Python's Life of Brian, but I saw something that REALLY would've wrecked my whole day- I saw the Duran Duran music video album, a disc that had been on my "Holy Grail" list a long time til I finally found one, this was only the second one I'd ever seen. The cover had the name and the picture of the group X'd out with a felt pen and written in big letters "F--- Duran Duran" and note that the caddy actually contained The Who Rocks America. First time I'd ever seen a CED defaced in such a way, needless to say if that'd been the first time I'd found the Duran Duran disc I would have been EXTREMELY devastated! The same place had a big space selling mostly video games, but there was a shelf with video tapes on it too. I found 3 Beta tapes that were Zenith dealer sales training tapes from 1979, one was titled Video Recorder Selling Points and another was Black and White TV Selling Points. I got real excited til I noticed the erase-protect holes were covered up- someone had taped over all of them!!!! I just about died right there; anybody have unruined copies of these tapes they could copy for me?

From: David Potochick  
To: ceds@teleport.com  
Subject: CED player #3 / Jane Fonda Workout.

Well, I ended up getting another player and a CED at a flea market for \$3.00. Now I have 3 players..... Yipee..... The new player is a SJT - 090 and the movie is "Jane Fonda's Workout". My wife likes it, I thought it was kind of weird. I like the fact that it's dual channel and that you can switch between words and music or just music on a stereo player. I might just copy the music off of it for myself, it's a catchy tune.

The SJT - 090 player that I bought works but it's really dusty inside. I plan on cleaning it before any massive use. The guy bought it years ago and rented movies for it but only had the Jane Fonda CED that came with the

player. It had been sitting in his attic for a long time he said..... I had to replace the insert / reject belt.

Later in the day at the same flea market I found another SJT-090 for sale. The guy wanted \$30.00 for it. I left it there for another CED collector though.... The guy didn't have any movies, he said that he just rented the disks a long time ago. The CED must have been a big rental thing at one time.

Well, I'll write more later..... I gotta go....

Later,

Dave.

Subject: Re: CED Digest Vol. 2 No. 15

In a message dated 97-04-13 05:53:19 EDT, you write:

<< He also has quite a few model SJT-90 players. They are a very basic RCA model player with the tan tops and square faces and minimal features. If anyone is interested in a spare player (or two) let me know. I'd like to sell them 1 for \$10, or 2 for \$16 each plus shipping.

Here is a question for the list. I'm also picking up some spare parts. They are in the RCA boxes, so they have part numbers on them. Does anyone know if these are just for the 90 series players, or if they will replace parts on other models as well?

Here are some of the parts he has.

154216 - Stylus  
157928 - Circuit  
157862 - Cover  
157563 - Gear  
157550 - Bracket  
155884 - Integrated Circuit  
154243 - Motor  
830022 - REsistors  
157538 - Actuator

If anyone is interested in those parts, I'll be selling those also. He had quite a few styluses/needles! I hope they are compatible with other model machines.

>>

I would be interested in 2 and 1 extra stylus for them. I am assuming they are in working order. Please Let me know what my total would be with shipping. I am not interested in getting them fast just ship as inexpensively as possible.

Thanks  
Larry

From: David Potochick  
To: ceds@teleport.com  
Subject: DVD - Not so great

I recently sampled DVD at a local Best Buy... Talk about pixelated..... This thing is more pixelated than DSS on a clear day..... I was not impressed... Actually I think they should rerelease the CED in competition with the DVD..... They would actually have something to compare it to.....

When watching a DVD, watch the grey or black in the background of the picture and you'll see the pixels changing.... This probably looks really nice on a big screen TV.....

The New Demo disk for the CED could go something like..... "You've seen the pixelated pictures of DVD movies.... But now.... Look at the crisp clear picture of the RCA CED player....." and so on..... My Laserdisc player far surpasses the DVD..... I'll wait until I see DVD players at flea markets before I pay \$600 for one.....

Later,  
  
Dave.

Hi,

Does anyone have any suggestions on why so many of my CED's skip and jump around? I just replaced the stylus and the disks seem to be in good shape. Someone wrote once that I should clean the lubricant off the disks. With what? Is that bad for the disk? Did these disks always skip, even when they were new? They seem to have an even worse life expectancy than a audio LP. Any specific cleaning advice would be appreciated!

Jim

Subject: VideoDisc Book

For those who are interested, there was a book published about the VideoDisc project. The title is "RCA and the VideoDisc - The business of research" by Margaret B.W. Graham. The book is published by the Cambridge University Press.

The book is an interesting historical perspective of technology development as well as the project problems that occurred.

One significant issue was in marketing of a video product. The first players were not stereo and you could not record on them. These were apparently significant issues with the buying public. On the positive side the programming was cheap, \$15 to \$25 vs \$75 to \$100.

Ted

Date: Tue, 29 Apr 1997 12:17:51 -0600  
From: David Potochick  
To: ceds@teleport.com  
Subject: CED Needle.....

Can CED skipping be needle related??? My most recent CED player was seldom used..... The person sold it to me for \$3.00 with the Jane Fonda disk.... He said that he recieved the player as a gift and hardly ever used it and never bought any other disks. Anyway, what I noticed is that my disks hardly skip at all on this new CED player. They play beautifully.... So, I might end up just buying needles for my other players and see if it solves the problem.....

I wish I would have seen the Nightline where they hold up a CED.... That would have been Kool!!! I'm wondering if DVD will be the next CED.....

Everyone (except on person who bought one) that I've talked to so far agrees with me on the pixelated picture... Sure DVD's look fine on small monitors... But, try blowing them up on a big screen TV.... You start seeing great big pixels changing..... CED's and LD's aren't perfect but at least you don't get pixels..... Watching a DVD on a big screen is like trying to magnify a .gif or .bmp file on a Computer.....

Well, later.....

Dave.

I am trying to sell some of my dust collectors. I Have for sale  
1 CED stereo video disk player. \$25 in mint condition.

30 disks 5 bucks each movie.  
The Muppet Movie  
The Blue Lagoon  
Deth Wish  
Deth Wish 2  
On golden Pond  
Excalibur 2 disks  
Blazing Saddles  
Mommie Dearest  
The Karate Kid, 2 Disks  
1 disk of Conan The Barbarian  
The Secret of NIMH  
Love Story  
Ben Hur 2 Disks  
Disney Cartoon Parade  
Daffy Duck's movie: Fantastic Island  
Escape To Witch Mountain  
Benji  
Slave of The Cannibal God  
The many adventures of Winnie the Pooh  
Disney Cartoon Parade vol 2  
Teachers  
MegaForce

Superman 1 2 disks  
Superman 2 2 disks  
Superman 3 2 disks  
National Lampoon's Vacation  
Beverly Hills Cop  
The Great Muppet Caper

Of course you may be asking yourself why would you be interested in this  
out of date machine well if you are interested please let me know I  
would  
like to know, But you don't have to tell me if you don't want to.

And this is not a laser disk player it is an early 80's analog  
selectavision  
made by RCA. The disks were made out of the same material as video  
tapes not  
CD's.

Mime-Version: 1.0

Sorry if this is getting a little off the topic of the mailing list, but I want to put in a few more comments about DVD. As was mentioned in the last mailing, DVD's look worse on bigger screens. The first time I commented on the "blockiness" of DVD to a salesperson at "The Good Guys" (a store that is anything but) he said "oh, that's because it's on a projection TV. They never have a very clear picture." Funny, that's also what they told me a couple years ago about DSS (WHY are so many people actually buying that thing???)

I wonder how salespeople sold CED's when they came out. Did they try to convince people that they didn't actually see the disc skip, or that it was nothing to worry about? It's funny how old video magazines often wrote about CED players as a viable product, seems the companies were putting cash in their pockets for not saying that they were a joke. Now history is repeating itself.

RCA now not only sells a DVD player, but also has their own DVD demo disc for instore play. I haven't gotten to watch it but I wonder if they brought back the blonde twins to sing the praises again? ;)

Subject: Best and Worst Side Breaks on CED's  
Mime-Version: 1.0

How about some discussion on what people feel are the best and worst breaks between side 1 and side 2 they have ever encountered on a CED. Here are my choices:

BEST:

"Raiders of the Lost Ark"

A visitor to the web site pointed this one out some time ago and I can't think of a better one. Side one ends at 58:11 right after Indiana Jones says "That's It"

WORST:

"2001" (Part 1)

Side 1 ends at 37:43 as the ship is landing on the moon, almost mid-note in Strauss' Blue Danube Waltz. Why couldn't they make it one minute longer to complete the scene and finish the song?

> what they told me a couple years ago about DSS (WHY are so many people  
> actually buying that thing???)

This is something that really scared me about DVD...I heard that they were using MPEG for compressing the video early on. After working in AV&C (a Tandy Brand store), the artifacting really got to me. Seems my fears are confirmed. :)

> I wonder how salespeople sold CED's when they came out. Did they try to

> history is repeating itself.

This is exactly the reason that I like to take magazine comments with a BIG grain of salt. Video Game mags are the worst for this candy-coating stuff...or just plain writing about things they haven't the slightest bit of information on.

This is I think the worst I've seen for breaks. I wish they had made the  
thing 3 sides instead of four. It would have been a lot more enjoyable.

Another comment about DVD for Video:

At this point in the game, I really don't see DVD as a viable option. The  
players I've seen are \$499 so far, they are NOT recordable. So, the only  
market they can hope to appeal to is the high-performance home user.  
However, the high-performance user is more likely to buy Laserdisc for  
three simple reasons:

- A. Cost is the same as DVD.
- B. More titles available.
- C. Higher Resolution picture.

Hey, it's off topic (sort of), but I want to see some traffic. :)

Regarding the comment about side breaks, I've noticed on a lot of the  
older movies, both CED and laserdisc, that they ended sides at the end of  
reels in the theatrical prints. Old transfers show the changeover marks;  
most new ones don't anymore. That's why "Rustler's Rhapsody" has a really  
bad side break (someone asks a question at the end of side 1 and the

other guy answers at the beginning of side 2!) but it's still OK to me since that's where the reel ended.

Movies on the Vestron label are really amusing because they always tried to cram as much as they could on side 1, sometimes they didn't even stop at the end of the reel, just took it as long as they could til the end of the side, the time counter often reaches 60 on these before it ends. This gives really short sides to short movies; I have The Lenny Bruce Performance Film and "The Magic Pony," both of which are under 75 minutes, so side 2 of these runs under 15 minutes! It's funny to look at the surfaces of these discs and see how little space was used. I have "Tempest" and "Never Say Never Again" which are 2-disc sets of movies that ran just slightly over 2 hours, and side 3 of these is also very short. Most discs seem to spread over sides more evenly, but these are exceptions!

BTW, why didn't they make a special "Turn Disc Over" type of message for unused sides, like side 4 of a 3-sided movie for example? Considering the market CED was intended for it seems it would have been ideal, rather than just having an "End" code immediately at the start of the side, I bet this caused a lot of people to think their players were broken! Laserdiscs always have interesting stuff on their unused sides, the funniest is the upside-down turtle, others have generic printed messages saying "Program Material is recorded only on the other side of this disc." Since my laserdisc player is autoreverse, these sides come up by themselves after the end of the movie, and for some strange reason I always let them play through before putting the disc away!

Subject: CED Digest Vol. 2 No. 19 -Reply

Woah.... Finally someone agrees with me on DVD..... I'm not crazy... I still don't see how DVD is going to sell..... Yes they're smaller than LD's but the picture quality is really grainy.... I went back to Best Buy after another writer to this CED page told me that I probably saw a flawed disc. Well, I saw another disc and it looked pixelated.... I'm not impressed with DVD at all.... I see it going the way of the CED...

I think when CED's came out the sales pitch had to do with CED being the best thing there was at that time. VHS tapes were a lot more expensive back then from what I remember and CED's were selling for a lot cheaper. You also have to remember that in the early days of the Laser disc there were a lot of flawed LD's. I read somewhere that there was a 90% return rate for the old Discovision LD's.... They simply didn't have the technology perfected back then....

I'll have to come up with my own Best / Worst disk side endings.... So far my favorite is still "Raiders Of The Lost Ark".... I was the one that pointed that out a couple of Editions ago..... As for the worst.... I'll have

to do some research....

Later,

Dave.

Subject: Weird CED's

Tom brought up the best and worst CED topic.... How about the weirdest CED's....

The weirdest CED that I have seen so far is "Jane Fondas Workout Video". My wife was watching this and said, "What woman in her right mind would exercise while wearing a necklace???" She said that any woman would take off her necklace because she wouldn't want her neck scratched up.... The whole workout video is just plain weird...

Another weird CED is Paul McCartney's "Rock Show"... I can't believe that we actually had time to watch the entire thing.... I get bored after the first fifteen minutes.....

The worst pan and scan is at the beginning of the movie "Benji". At the opening credits, you see the whole scene shift to the left to compensate for names.....

More Later,

Dave.

Subject: SGT Player and Discs 4 Sale

I posted an ad in the CED web site and just wanted to follow that up with this notice. The player I have is an RCA SGT100 that is still functioning and I have 66 discs for sale. I can either sell the player seperate from the discs or sell everything as a unit. I'm looking at \$20 for the player and \$330 for all the discs (\$5 a disc) plus any shipping charges I would incur. Here's a list of the discs that I have "2 besides the title means I have duplicate"..... ALIEN, AMERICAN WEREWOLF/LONDON, ARTHUR(2), THE BIRDS, CARRIE, CAT PEOPLE(1982), CHRISTINE, CREEPSHOW, CUJO, DAMIEN OMEN II, DEAD ZONE, DRAGONSLAYER, DRESSED TO KILL, ELEPHANT MAN, EMPIRE STRIKES BACK, EXORCIST, FINAL CONFLICT, FIRESTARTER, FIRST BLOOD(2), THE FOG, FRIDAY THE 13TH PARTS 1-4, THE GODFATHER, GODZILLA, GRADUATION DAY, HALLOWEENS II & III, THE HOWLING, JAWS, LORDS OF DISCIPLINE, MASK, NIGHTHAWKS, AN OFFICER AND A GENTLEMAN (2), THE OMEN, POLTERGEIST, PSYCHO 1 & 2, PUMPING IRON, RAIDERS OF THE LOST ARK (2), REAR WINDOW, RED DAWN, RICHARD PRYOR LIVE IN CONCERT, RICHARD PRYOR LIVE ON THE SUNSET STRIP, RISKY BUSINESS, ROCKY(2), ROCKY II, ROCKYIII(2), SCANNERS, THE SHINING, STAR WARS, STRIPES, SUPERMAN THE MOVIE, THE TERMINATOR, TERROR IN THE AISLES, THE TEXAS CHAINSAW MASSACRE (AUTOGRAPHED BY GUNNAR HANSEN "LEATHERFACE"), THE THING (1982), VICTORY, ZOMBIE.

All discs have been well taken care of and are in great condition. If interested e-mail me at DWest14582@aol.com

Subject: Re: CED Digest Vol. 2 No. 20

This issue has a couple of topics that bring back some memories.

Regarding the breaks. My recollection is that there was great emphasis on getting as much programming on one side as possible, regardless of the "wierdness" of the break. We all had players and as you might imagine we had a plethora of titles. As a matter of fact, we usually got a stack of discs a day from DISC Manufacturing. Anyway, we always complained about the breaks to no avail as the Mastering Process was very time consuming and expensive. To redo the master was not possible as the emphasis was on getting titles available and not necessarily making the breaks look good. Also as I recall the Mastering was done essentially by engineering and not by a more estheticly aware group. Again the emphasis was on getting as much on the disc as possible.

It was a perception at RCA that one of the disadvantages with VideoDisc, CED and LD, was that the programming on a side was a disadvantage. Also, it was thought that to put as much material on one side, regardless of the total time of the programming, was important to maximize the "time to flip" for the customer. In my opinion, esthetics should have been used first.

Also, the limited playback time per side was an issue for RCA. The Star Wars CED pushed the limit for programming by having more than one hour on a side. By the way I recall finding the hanging dice in the Millenium Falcon during one of my system evaluations. Everyone thought it was pretty cool. Video players did not do freeze frame very well back then. The parody "Hardware Wars" showed the dice, highly magnified of course, and low and behold there they were in the real movie only for one scene.

It was also interesting about the many comparisons that were made between CED and LD especially the technical ones. It was surprising to us that LD had "skips" just like CED. It was a preception then that the LD should not have had the problem since it was not a mechnaical pickup like CED. We also thought that there was more robust signal processing on the front end than we had. Not the case. Their skip problems were, in our opinion greater than ours. Also their recovery mechanism was very poor. Many times the LD would not recover. The CED players have a "kicker" circuit so that if there is a skip or a locked groove the uProcessor would kick the stylus to a groove that was clear. The DAXI code was used to determine the location of the stylus. Recall that there are (I hope I get this right) four frames or eight fields per

groove. Each field has a unique DAXI code that is sequential to the previous one. If you take a disc out of a jacket and look at the pattern , you will see areas that are identical. This is the NTSC vertical interval. If you have a very bad disc, try making a clock out of it. very cool looking. Rather large though.

Next was the delamination of the LD's. This was a major problem for LD's and there were many recalls of titles. LD's were produces as two separate discs and then laminated together. A process that was never fully perfected until later. As you might recall the number of LD's was greatly reduced after the demise of CED.

Well sorry for all the ramblings, but you seem like a group that might appreciate the info and it is fun recalling a really exciting, stimulating and rewarding time in my engineering career.

Regards to all,  
Ted

>are confirmed. :)

There is nothing wrong with MPEG per se. It can meet broadcast specifications IF you want it too.

MPEG-I is pretty atrocious at it's best.

MPEG-2 can be good if you let it. It's the problem of varying levels of compression that are chosen that can make it pretty bad.

However since the DVD is being pushed to the consumer market - and the LD is held as an 'elitist' format - I wouldn't be surprised if the 'bean counter' mentality holds and higher compression is used to get more time per disk.

There have been 6 video disk formats so far in this century.

None has made an impact as much as the current laser disk. We will just have to wait and see if it will stick around.

There are far more technologies looking for a market, than markets looking for a technology. That is shown by the raging success of DCC and MD :-) :-) ;-)

I bought a CED player the first week they were out. I had waited a year for an LD previously and finally cancelled that. When the RCA was released it had more titles in the catalog than the LDs did.

After two weeks it went back. Four out of the first six disks had to be returned because of skipping. Exchange after exchange - until the dealer and I decided it was time to forget all this foolishness.

The 100 probably never should have left the labs.

The 400 series was a quite a different animal. IF that had been the first machine RCA had released the format may have had a chance. Gone was the weave and faint diagonal lines (if you knew what to look for) that identified the picture as CED. The direct drive instead of belts helped that.

Until I see something better I'll stick with my LDs (and my CED's for nostalgia purposed) and my ED-Beta. Too bad the LD's can't match the EDs performance. I think we'll have to wait for HDTV for that.

Bill

Subject: Side breaks

Jesse Skeen wrote:

"Regarding the comment about side breaks, I've noticed on a lot of the older movies, both CED and laserdisc, that they ended sides at the end of reels in the theatrical prints. Old transfers show the changeover marks; most new ones don't anymore."

That's because the older transfers were often made from prints, usually made on low-contrast film, that in those days were handled by the lab in

the same way as theatrical prints. This included adding change marks, unless the studio advised otherwise, because the networks and local stations often used the change marks in the same way that a theater projectionist would. It also meant that the print was a third- or fourth-generation element, just as a theatrical print.

Nowadays most theatrical films are transferred from a second-generation element, meaning an interpositive, a "lo-con" print or a reversal internegative, that was made directly from "The Negative" specifically for video transfer use. (I call it "The Negative" because the best existing film is referred to that way, even though it may not necessarily be the same piece of film that went through the camera. For "Snow White," for example, this term refers to the color negative that was generated on the Cineon system a few years ago, not the RGB negative that was originally shot.) Not only does this greatly reduce generation losses, but there is no need for change marks. (Programs and commercials shot on film for TV are normally transferred directly from the camera negative and then edited on tape. Feature films can be transferred directly as well, but they usually aren't due to the risks involved in taking "The Negative" out of the storage facility for a few days for the transfer.)

Getting back to CED, a guy I know in Hollywood transferred the "rings" animation (for RCA's stereo discs) and some other stuff for RCA SelectaVision back then, and he told me that they were \*very\* fussy about picture and sound quality. RCA was having its transfers done on the Rank Cintel Mark III flying-spot scanner at a time (only a few years after the Mark III was first adapted for NTSC) when some studios were still doing transfers for home video on older Plumbicon-based film camera chain systems.

(I know this is starting to get off topic again, but...)  
I participated in Video Magazine's last "Mad as Hell" survey and had a few of my answers printed eventually. They quoted me saying "People who make fun of my CED videodisc player", my actual comment had to do with friends I had saying I was nuts for having one, which is true, but all THEY had were MONO VHS machines for watching movies! I'd rather watch my stereo CED player than any mono piece of junk; even some movie theaters still only have mono sound which is inexcusable!  
They also quoted me, with my name, saying that everyone should "Just say 'no' to cable", which I thought was pretty cool.  
I will try to flood them with a 'complaint' about "lack of new releases on CED", just to see if they mention it if they get enough!

Subject: Re: CED Digest Vol. 2 No. 20

Tom,

I have to vent a little about this DVD bashing here. Suffice it to say, I'm one of the few people in the world with a CED, Laserdisc and DVD players in my home theater setup.

Let's address the major factual errors:

A. Pixellation. Yes, some of the demo discs suffered from a touch of it because they hadn't figured how to encode the discs properly. And yes, some of the titles in current release, particularly the Warner Home Video titles, have it in spots because of compression needs. WHV still isn't making dual-layer discs, which gets them in trouble if they need to go over 133 minutes. Check out any of the dual-layer MGM or New Line releases and I doubt you'll see much pixellation if any. Just like laserdisc, and CED for that matter, it depends on who makes the disc.

B: Lines of resolution. Peak 500, real world about 425. Twice that of VHS, and more than CED or laserdisc. You can tell the difference on a 700-line TV.

C: Companies paying off the press: Yeah, right. We as a group have been trashing DVD for 18 months, and generally are as surprised as anyone that it actually works, and that people are buying it in surprising numbers. If a format sucks, we say it does. That's why MD and DCC haven't ever sold.

Sorry if this seems a little grouchy. I'm fond of my CED, wrote a cute story comparing it and DVD last year, and I've begun collecting titles. But I'm also not anchored in the past and I can embrace new technology.

Subject: Gobbledegook, DVD, etc.....

So, why doesn't RCA just come out with the Digital CED in competition with the DVD???? They could even bring back the idea for the unhoused disk like the early players.... Discs could play at 33 1/3 rpm and contain MPEG2 digital information..... Hey, why not digital vinyl records for that matter??? The digital information could be recorded on the vinyl record and then played back through a decoder of some sort.....

Someone could even create the digital 8 track tape.... DAT and DCC formats never sold... Why not try the Digital 8 track tape??? You could market it in competition with the Minidisk.....

Just some corny digital ideas..... Isn't digital technology wonderful????

Dave.

Subject: A sad story.....

I used to visit an electronic repair store in Crown Point Indiana known as Quickle Electronics... Mr. Quickle was a nice old man that ran the store and would repair VCR's, TV's, Stereos and whatever else you brought him... He had 8 track stereo systems still in the boxes in mint condition. Nobody ever bought them and he just kept them after so many years..... He had everything in that store.... Well, anyway, one day I remember that he showed me a CED price catalog.... The prices for the movies ranged around being \$39.95 as compared with VHS movies at the time which were \$150.00... The CED catalog had the titles of all the movies and the ordering price for the movies..... He might have had a couple of players in his piles of stuff around the store.....

Well, I had to go off to college in September of 1992 and ,while I was away at college, Mr. Quickle's family decided that Mr. Quickle was to old to run his store. His family found it best to put him in a nursing home.... They closed his store, put him in a nursing home and Had a big Garbage truck come and haul everything in his store away.... (At least that's what I was told.....) I haven't seen Mr. Quickle since.... Now, I wish I would have invested in some of his mint condition 1970's electronics.....

Subject: Stereo Players Introduced 15 Years Ago

Mime-Version: 1.0

May marks the 15th anniversary of RCA's stereo VideoDisc players. Here is an excerpt from the G&M DiscNews Newsletter making the announcement:

"The big news this month are RCA's two new stereo disc players. Along with the new stereo videodiscs, and hooked up to both your TV and a stereo system, the experience is almost beyond description. RCA's stereo system also incorporates the CBS CX noise reduction system, which increases dynamic range while decreasing noise levels. There are 8 stereo discs available now, with perhaps 20-30 available by year's end. Both of the new players feature video and stereo audio output jacks, so connection direct to a video monitor is possible. Also, all the function control buttons are now solenoid operated. And a special switch lets one play binaural discs, switching between L and R side information. The SGT200 is almost identical to the current SFT100, at \$349. The new SGT250, however, is the pride and joy of the line. It has automatic loading, and wireless remote control. It costs just \$399."

G&M was a family-run mail order supplier of CED's for the entire CED production era. This is the earliest DiscNews newsletter I've been able to obtain, so if anybody else has these, I need all the 1981 and early 1982 editions, as well as the March/April 1986 edition. G&M closed a few years after the last CED's were released when the founder went into retirement. His son, who was editor of DiscNews, is now a well-known author of computer "how to" books. I tried to get DiscNews copies from them, but everything was disposed of when the business closed.

CED Digest Vol. 2 No. 22 5/31/97

-----  
From: StereoBoy  
Date: Sun, 25 May 1997 12:14:11 -0400 (EDT)  
To: ceds@teleport.com  
Subject: Re: CED VS LD Skips

In a message dated 97-05-25 10:41:24 EDT, Ted Dudziak writes:

<< It was surprising tous that LD had "skips" just like CED. It was a preception then that the LD should not have had the problem since it was not a mechnaical pickup

like CED. We also thought that there was more robust signal processing on the front end than we had. Not the case. Their skip problems were, in our opinion greater than ours. Also their recovery mechanism was very

poor. Many times the LD would not recover. >>

Actually, the skips from early MCA DiscoVision discs were due to the combination of player and disc. The Magnavox Magnavision VH-8000 (and 8005) players could only track near perfect discs, and thus did not do well with the majority of software coming out of MCA's Carson main production and Costa Mesa Pilot Plant. The introduction of Pioneer's VP-1000 for Christmas 1980, pretty much eliminated all skipping except in the case of VERY defective discs. Since MCA DiscoVision was pressing discs on what were (slightly modified) conventional LP record presses, and were NOT using clean room conditions (clean rooms at DiscoVision did not happen until IBM came on board), the tracks of the discs would end up out of spec. Even a track that is slightly out of spec will cause the disc to LaserLock or skip. Pioneer incorporated additional lens movement capability into their VP-1000 to handle the out of spec tracks...this led to Philips lodging an official complaint with MCA charging collusion between Pioneer and DiscoVision and with hiding the problems from Philips.

With the opening of Pioneer's Kofu plant in Japan, and the truly clean room conditions, skipping and laser lock were a thing of the past.

I bought my first LD player X-Mas 81 (a Pioneer LD-1100) and the skipping problem, even with DiscoVision titles was MUCH less severe than CED's. I got my (SGT-250) CED player Jan 83, and was horrified by the skips. It was so bad that I stopped buying CED discs altogether, and wasn't until the release of the SJT-400 that I started buying again. (and while that player was MUCH, MUCH better, it still would skip 100% more than LD) Plus, you didn't have to worry about skipping increasing with time on a LaserDisc (unless you scratched it horribly) as you did with a CED.

>>Next was the delamination of the LD's. This was a major problem for LD's and there were many recalls of titles. LD's were produced as two separate discs and then laminated together. A process that was never fully perfected until later. As you might recall the number of LD's was greatly reduced after the demise of CED.<<

Actually, DiscoVision titles had no problems with LaserRot (Delamination), which is caused by the glue bonding the two sides together eating through the aluminum coating. If a DiscoVision title made it to the store in good condition, it would stay that way (I have over 200 MCA DiscoVision titles and have NEVER had one rot...if it's good, it stays good). DiscoVision's problem was inclusion (dust, insects, etc..trapped beneath the plastic of the disc) caused by the non-clean room environment, and discs that didn't meet the MCA/Philips spec; and the Magnavox players of the time.

Pioneer DID have a major problem with LaserRot, in both the American and Japan plant. It was eventually traced to an impurity in the water used to mix the bonding glue. Pioneer DID issue a recall of titles in '86 or so, but it had nothing to do with the demise of CED...in fact, most of the titles were eventually repressed. (except for titles made by the horrid, and now, thankfully out of business, Technidisc)

We can thank RCA for starting the practice of using high quality, lowcon negatives for all transfers. DiscoVision was the first to use a Rank Cintel Mark III flying-spot scanner, but it was RCA who insisted on negatives instead of prints for the best video quality. I remember how stunning the Star Wars CED transfer was. It looked better than the LD since RCA routinely redid transfers for VideoDisc release. (I have a single-sided, floppy, test LaserDisc pressing by MCA DiscoVision from 1975, of High Planes Drifter, and it was transferred using a conventional film chain. While the disc plays fine on todays players, the transfer shows just how big an advance the Rank truly was)

One last thing...in regards to pricing...I love CED and all, but it bugs me when people say CED VideoDiscs were the first low cost titles on home video.

Not true. MCA DiscoVision's original list prices (1978-79) were \$5.95, \$9.95 and \$15.95 per title (for boxed, multi-disc sets!)...can't get much cheaper than that!

Cheers!

Ty Chamberlain

Subject: ad to sell ceds & players

I have the following discs to sell, along with three SKT 400 players with remotes and owner's manuals. I want to sell everything as a package to make shipping worthwhile. All discs were purchased new and those noted are still in the original shrink wrap with the original price tags attached. I am open to offers for the package. I can be reached by e-mail [sobel@isracom.co.il](mailto:sobel@isracom.co.il) or phone 00972 50 391121. Everything is in pristine condition and I'm selling because I don't have room in my new apartment here for all of this stuff. Now here's the list:

BAREFOOT CONTESSA DOUBLE

KNOCK ON ANY DOOR

HEAVEN CAN WAIT

CODE OF SILENCE

MEET ME IN ST. LOUIS NEW

RED DAWN

STONE KILLER

THE DOGS OF WAR

HE KNOWS YOU'RE ALONE

Tom, this latest issue was really great! Full of very interesting items about the good old days of CED collecting! I really enjoy the letters from Ted Dudziak and would like to think he could contribute a new item to each newsletter. His stories are always of great interest to us all. Keep up the great work! Glenn

Thank you for your e mail request today on my brief memo mentioned in the INTERNET CED DIGEST vol 1, no. 21. IF YOU ARE INTERESTED In purchasing my ced video disc collection and players please contact me as indicated below. AS I INDICATED I am in Houston and am not interested in wrapping and mail this collection.

If you you are located in the Houston area you could come by to pick it up I am more inclined to sell it to you. Since there were numerous requests I just took the time to type out the main title of the discs that I have. The titles will be in CAPS. There will be a few typos. You can reach me at:

Brian Nelson,

31 Gessner Rd. ( for the next few weeks we will be at this address.I am not sure what our new address will be but the e mail, beeper, mobile phone voice mail will be the same. )

Houston, TX 77024

tel. 713-467-3191

email bnelson@onramp. net.

mobile 281-546-8368

pager 713-867-3929

The players I have are as follows.

RCA SELECTAVISION SsJT300,

RCA SELECTAVISION SJT100

MONKY WARDS GEN10301.

REALISTIC 16-301,

RCA Selectovision Stereo.SGT. 250

Some work and some do not. I prefer to sell the whole thing as a unit but if there is a particular disc that you can't live without and have money ready to go then call and if I still have it we can sell it to you.

My CED Collection consists of :(Typos not corrected for the most part. )

Subject: DVD or else.....

Well, it seems that the stores in the area where I live are pretty much forcing you to switch from LD to DVD..... Allready stores here in St. Louis, MO are having clearance sales of all of their LD material to make way for the DVD.... Stores that I shall leave nameless say that they will no longer carry LD's when they start recieving DVD's..... So, it's like you will buy DVD or else.... You have no choice.... I think it's pretty stupid really..... More on this later...

Dave.

To: ceds@teleport.com

Last issue I only had time to put the discs I have for sale in non alphabetical order. this is hard to find what you want. Here is a better version.

I F YOU ARE INTERESTED In purchasing my ced video disc collection and players please contact me as indicated below. AS I INDICATED I am in Houston If you are located in the Houston area you could come by to see what I have. Since there were numerous requests I just took the time to type out the main title of the discs that I have. THE LIST BELOW IS SORT OF APHABETICAL. You can reach me at

Brian Nelson, 31 Gessner Rd. ( for the next few weeks we will be at the following.

Houston, TX 77024 tel. 713-467-3191 email bnelson@onramp. net. mobile 281-546-8368beeper 713-867-3929

The players I have are as follows.

RCA SELECTAVISION SsJT300,RCA SELECTAVISION SJT100,MONKY WARDS N10301. REALISTIC 16-301, RCA Selectovision Stereo.SGT. 250 Some work and some do not. I prefer to sell the whole thing as a unit but if there is a particular disc that you can't live without and have money ready to go then give me a call and if we still have it we can do something about it.

My CED Collection consists of :(Typos not corrected for the most part. )

To Bud

Here are the CED I am intrested in  
AMITYVILLE HORROR, THE  
AMITYVILLE 2 THE POSSESSION

EMPIRE STRIKES BACK, THE  
STAR WARS  
NATIONAL LAMPOONS ANIMAL HOUSE

INCUBUS, THE

Do you want cash only or would you accept a trade of some kind. I  
rented laser disks and copied many WS movies onto Maxell VHS HIFI tapes.  
I have a SuberBeta and am recopying the movies. If you are intresed in  
trading CED's for the tapes let me know.

Are the lables all in good condition? Do the disks play well?

To: Tom Howe <ceds@teleport.com>  
Subject: Re: CED Digest Vol. 2 No. 22

I think it is interesting to recall the development decisions for a  
product. The F and G line players, as I recall, did not have the kicker  
circuit in it. The J and K line players (H was skipped, sorry about  
that) had the kicker circuit and recovered very nicely although there  
are times when it was still tough to recover.

The kicker circuit was responsible for correcting a skip again based

upon the DAXI code in the vertical interval. The LaserVision unit of course was optical and sensitive to depth of field issues while the CED being a mechanical process was sensitive to particulates, etc. The caddy was responsible for protecting the disc during handling as well as loading of the disc.

The production process used for the discs was identical to that used for the old 33 audio discs. Basically, a "puck" was formed by the loaded plastic and placed into the press. Under a lot of heat and pressure the puck was formed into the disc, the flash cut off the edges and the disc placed upon the spindle. This was all done automatically without humans touching the disc. The stack of discs (all the same title) were then sent to a holding area where a sample was taken and played upon a realtime tester. I designed all the circuits for the data acquisition portion of the tester.

The area that was used for pressing the discs was not at a clean room level. As I recall it was either class 10,000 or 1,000 environment. Not much cleaner than a typical home. Handling was the biggest issue with CED as well as setting the press operating parameters. Low production costs were a big issue and a modification of the vinyl process used at RCA records on 30th Street should have been effective in the long run.

The J line players were referred to as the "features player". These units had many operational features. Most of you are probably aware. At the same time that development was underway on this product, RCA and Hitachi were developing a digital control bus for controlling TV's, stereos, videodisc, AM/FM receivers, etc. The negotiations for the standards were going slower than we in player engineering and engineers at the labs wanted so I suggested an alternative. I believe it was included in the release. The standard was called MAV which stood for Multiple Audio Video.

At the same time that videodisc was in development, the IBM-PC was introduced and the Apple II was going full guns. We decided to implement an RS-232 interface on the MAV port. Basically, the videodisc player "woke up" in the MAV mode. However, if the device connected to the videodisc asserted a "break" or an extended space on the line, then the unit would switch to the RS-232 mode. The commands were ASCII equivalents for FF, REV, etc. One should be able to communicate with the port using a PC and the terminal program in Windows or Procomm or some other communications program. The command sent by the PC will cause a response by the player. I left RCA before J line was released or I might have the command set. The commands were one or two letters and were the obvious combinations for the function that you want. FF for fast forward, etc. Give it a try but the interface needs to be 0 to 5v unless the boys put the clamp diode in the input circuit.

Again these "memories" are my best recollections. Lots of good stuff in

the players. The engineers used the development to have some fun.  
Again, it was a great project.

Ted

From: Larry Scott Ii  
To: ceds@teleport.com  
Subject: Info on older Pioneer LD player?  
MIME-Version: 1.0

Hey all.. with the recent discussion of older LD players, I was wondering if someone could provide a bit of general information on the Pioneer LD-V2000 model LD player. I acquired one several years ago very cheap, and so far it has worked flawlessly (well, almost.. more on that later) .. I was wondering when it was manufactured (I guess early to mid 80's?) and if there was anything I should look out for to keep it in good repair. The only problem with it I've seen so far is that it will not play Dolby AC-3 discs properly.. the picture is fine, but when I tried Mortal Kombat in it, it apparently was playing \*all\* the encoded audio at once.. the normal soundtrack, and the "director's commentary" all blended together.. No biggie though.. MK wasn't a very good movie anyway :)

Thanks..  
Larry

Subject: Help needed locating belt.

Hi all,  
I recently found my first CED player,a Sears Model # 934.54780150. The nameplate says this machine was built in June 1981.When attempting to play this machine for the first time,it worked for about two minutes before things bound up inside and stopped working.  
Upon disassembly I found the toothed belt that drives the stylus carriage for the most part was disintegrated.All that was left were the strings that were imbedded within the belt.There was enough belt material left to determine that there were approx. 12 teeth per inch,the belt appeared to be 1/8" wide.In measureing the circumference of the strings it came to about 15".So I guess that is what I`m looking for.I tried Sears and got the expected response that part are no longer available for this unit.Tried a few electronic repair shops and they suggested Radio Shack.Radio Shack does have a computer listing of some units and the Tandy replacement p/n.In this case no luck.  
So can anybody steer me to a parts source,sell me a belt or help in any way? The machine is in absolutly perfect condition.Even has the boxed remote and owners manual.  
I`d sure hate to see the machine rendered useless for something as simple as belt.

Thanks for reading,  
John

Subject: RE:Letter to Video Magazine

Hi Tom,

The June issue of Video Magazine featured an article on Widescreen Video that didn't mention the pioneering work done by RCA CEDs in the early 80's. I sent them this letter, let's see if they publish it.

"Ken Korman's article on the history of widescreen (June 1997) cites the 1984 tape and laserdisk release of Woody Allen's Manhattan as beginning of widescreen releases in the proper aspect ratio on home video. This is inaccurate as another video format made a commitment to letterboxing on video earlier. Manhattan made its video debut on CED disk, and Video Magazine wrote about the release, commending RCA at the time for taking the step of shame on you for forgetting your own history and perspective. Let's give credit where credit is due.

RCA began issuing letterboxed titles of "cult" favorites on CED in 1983 (before the start-up of the Criterion Company). Among the titles issued were Monty Python and the Holy Grail, The Long Goodbye, King of Hearts and Amarcord, all of which would not see letterboxed presentations in other video formats until at least 10 years later. The disk magazines featured an icon depicting a letterboxed tv screen with the following explanation: "This videodisc features RCA's innovative widescreen technique. In order to preserve the complete width of the film in the space available on a television screen, a blank area will appear at the top and bottom consistently throughout the film"."

Subject: ceds & RCA 400's for sale

I had many people interested in the 647 discs (approx 1/3 of them new) and the three RCA 400 random access players. I need to sell everything together to make shipping back to the U.S.A. worthwhile in that it will cost me approximately \$1,000 to ship the lot. I'm moving to a new house here in a few weeks and need this stuff out of my life. I'm willing to listen to any reasonable offer. I'd hate to see my prized collection end up in the dumpster because here all they have is PAL format TV's and NTSC is useless to most people. So if any of you want a really good collection at a really good price with three of RCA's last machines (complete with remotes and owner's manuals)

e-mail me at sobel@isracom.co.il .The listing of the discs was in last week's ced newsletter. Thanks.

Subject: Skipping problems with CED player SFT-100  
From: Peter Goldberg  
To: "CED Digest" <ceds@teleport.com>  
Mime-Version: 1.0  
Date: Sun, 8 Jun 1997 11:37:14 -0400

I jsut got a SFT-100 playaer and have been having some problems, I hope fellow CEDers can help out.

I just purchased a CED player from someone + disks. The model is a SFT-100, the seller said it had worked fine wehn he had it. He bought it from someone who kept it in EX shape, it looks like new. It was packed well for transit and a felt pad was put inside the machine under the door to keep the turntable from spinning. I unpacked it and hooked it up. I started getting a skipping prblem with it. I have a SKt-090 and the disks DID NOT SKIP in that machine so I assume it was not the disks. I turned it off and tried it again in a half hour or so. I tried the same diks and they worked ok for about 5 min. Then the skipping returned jsut like a LP would skip over and over again, the CED jsut played the same immagine over and over again and would not move forward. I unplugged the unit and figured the problem was dirt on the needle. I lifted it out and used a brand new soft LP brush on it. I put the cartige back in and then tried the player agin with the same disks that skipped before, the asame problem occured. I tried another disk and it played FINE, I then tried a BRAND NEW SEALED DISK. The new sealed never been used disk also skipped very badly!!

So what do you think the problem is? 1. Worn needle ? 2. Electronic problem? 3. Arm out of balance? 4. Disk loading improperly? 5. Turntable needing adjustment(it seem to track find to me no woobling) The selector swich is off a bit also how to adjsut it??

I hope it is only the needle if not I may return it to the seller. I am getting a SGT-250 soon so I hope the 3rd CED player will be the charm with no problems. The 090 I got is having a lot of problems 1. The disk is somtimes left in the machine ( worn belt?) 2. The turntable is woobling(how to fix?)

IS there anything or any problems I should look for in my SGT-250 when I get it???

In conclusion what do you think the problem is with the terrible skipping on my SFT-100?

As I recall for the Colecovision system there were several proposed "Super Game Modules" (the final product being the ADAM computer) one of which used a videodisc player to do games like Dragon's Lair and Space Ace through the RS-232 serial port which you suggest here. RCA and Coleco were supposed to have collaborated on this if I remember correctly.

Subject: RE:Hitachi/Realistic/Sears Timing Belt  
Mime-Version: 1.0

Hitachi CED players (and their Realistic and Sears name-brand equivalentents) use a orange-colored reinforced nylon timing belt to precisely advance the pickup arm assembly. This belt is an industry standard part that should be available from parts suppliers specializing in timing belts. Here are the specifications:

1/8" wide 190T80 timing belt

The 190T80 number should be printed in tiny lettering on the smooth side of the belt and means the belt has a total of 190 teeth with a pitch of 0.080" (pitch being the distance between the same point on adjacent teeth). All Hitachi, Realistic, and Hitachi-style Sears players use the same belt, and the part is still available through Sears Parts at (800)366-7278 for \$6.99. The part number is 46-39699-3.

One point of confusion about Sears players is that the model number 934.5481135 on the back of the Sears gold-colored Stereo model is the model number for a VCR rather than a CED player. The correct number for this player is 934.54810350 which is the number printed in the owner's and service manuals, and is also the number used by the Sears Parts people. All the Sears players should have a zero on the end of the model number, which is omitted on a lot of the player labels.

Subject: The First Letterboxed VideoDisc  
Mime-Version: 1.0

Here is a posting sent to Usenet a few weeks ago concerning the first use of letterboxing on home video, which I believe was the CED Amarcord. I've been planning on using Amarcord as the next featured CED at the web site, as it seems to be the belief of Video Magazine (see CED Digest Vol. 2 No. 23) that the LaserDisc Manhattan was the first letterboxed video release, when it was actually the last letterboxed CED. No one on Usenet could cite a letterboxed video release that predates Amarcord, but if anyone on CED Digest has any information on this, please post it.

Tom,

It looks like I DO have the specification for the serial port as well as  
the on-screen display IC used in the J and K line players. I also have  
other documents such as the notes that were used for the technical

writeup of the SFT-100 player, a copy of the VIP-1000 service manual from Hitachi.

While I am not willing at this time to give up the originals I would be willing to share copies of what I have.

I was looking through my documents in an attempt to help Peter Goldberg with his skipping problem.

Subject: Re: CED Digest Vol. 2 No. 24

I have a wee question for you all...

I have a SJT 400 Player. When I got it it did not have a manual or a remote control so I have been searching for one for a long time. Well, a few weeks ago I came across something called "Digital COMmand Center" by RCA. Big huge remote that had buttons like "Band" "Audio B" "Page" etc on it so I hurried it home after paying the exorbinant \$20 for it. Nothing. Nada. So I figured it was either broken or did not work with the player.

Today I saw another one - IN THE BOX (no instructions) this one was a paltry \$5. SO I ighured it HAS to work.

Got it home and it doesn't seem to do anything either. EXCEPT on my "A Week at The Races" Game it flashes "Illegal Command Entered" when I hit "Audio B" (The first one does this as well I found out).

So, couple of questions:  
Am I doing something wrong?  
Will this not work with the SJT-400?  
What DOES it work with?  
If I can't use it does somebody else want one?

Thanks

-Marlin

Subject: RCA Digital Command Center

On a related matter, I was looking at the scans of the owners manual to the SKT-400 and noticed that the DIGital Command center in there is different (slightly) from the one I have.

Mine does NOT have a Disk button, but rather has "TV" VCR" "AUX" "AM/FM" "PHON" "TAPE" and "CD"

Also, instead of the "0" button saying "Aux" over it (as it does in the SKT-400 manual) mine says "Input"

Thanks again and any help is appreciated.

Mime-Version: 1.0

Marlin:

When RCA introduced the original CRK 32 Digital Command Center in late 1983 there were only three mode buttons on the upper left, but RCA had the Dimensia Integrated Component System under development, so space was left to add additional mode buttons. When Dimensia was marketed about a year later (after the CED cancellation announcement), the DISC button was renamed VID2, but it continued to function as a DISC button to control a 400 series player. Due to the layout of the circuit board inside these first generation Digital Command Centers, the third button from the left on the top row will always function as a DISC mode button.

But you may have noticed that the CRK 42 units you have are missing the third button from the left. There's just an empty spot where the button should be. This was a strange thing for RCA to do, since the PAGE, BAND, and SEEK buttons specific to interactive CED usage are still labeled on the unit. The good news

is that the DISC button is still there, it's just hidden under the top panel, so the CRK 42 remote can be used for full interactive control of the 400 series player. There are two ways to accomplish this. With batteries installed in the unit, remove the four screws holding the top and bottom of the case together, then remove the five screws holding the circuit board to the top panel. Now the keypad can be separated from the top panel (being careful not to lose the grounding spring), the hidden button can be pushed, and the unit reassembled. As long as the batteries continue to power the unit, and no other mode button is pushed, the Digital Command Center will function as a 400 series remote. The other option would be to drill or cut a hole in the casing above the DISC button position when the remote is disassembled. Then a straightened paperclip or some other small instrument could be used to activate the DISC button.

OUTSTANDING!!!!!!

EXCELLENT!!!!

(Can you tell how happy I am?!?!?!?!?!)

This is GREAT! Tom, you are a deity among men! On a side note - the circuit board in the Command Center I have (you termed it model CRK 42) states CRK 32! So they did not even bother to change it!

Excellent. I made a rather largeish hole in the old one but I think the second one I will put a very small paperclip sized hole in it. (The second one is the new one so I do not want it to be all nastified by my bad drilling!

Thanks again!

-----  
Subject: SFT-100 Player Tried My Best  
From: Peter Goldberg  
To: <ceds@teleport.com>  
Mime-Version: 1.0  
Date: Sun, 22 Jun 1997 01:46:20 -0400

Hello CED'ers

Last week a posting of mine was in the digest about skipping of my SFT-100. I followed all the GREAT suggestions. I was adjusting the camshafts, to try and "fix" the out of wack function lever. While doing so (very carefully) one of the metal switches above the camshaft fell out of place. Putting it back in proved impossible and that metal switch was the one that controlled the play function. I can see why RCA did away with that function switch on the SFT-100, the entire system with the switch seemed to be very trouble prone.

I did get a SGT-250 and it is working fine so the third CED player was the CHARM! IF anyone has a working remote for that player for sale let me know! Was it a wired remote or was it wireless? My 250 has a silver front and very plain looking, did all 250's look like this?

The SGT-250 seems to be the most "reliable" of the line with the 400

series also.

To bad RCA didnt introduce those players frist instead of the trouble prone 090 and SFT-100 or SGT-100. Again thank you for everyones help!!!

Peter

Hi,

I have come upon a RCA VideoDisc player and about 75 movies. I live in Massachusetts. Is there anyone out there that has any interest in this collection?

Thanks.

I have the following discs for sale:

\$3.50 each plus \$1 each shipping. 2 disc movies are \$7 plus \$2 shipping.

Will trade 3 of the ones below for any one I do not have (see my web page for the ones I have!)

48 Hrs.  
Adam and the Ants  
...And Justice for All  
Arthur  
Bells are Ringing  
Ben Hur (2 discs)  
The Bette Midler Show  
Black Stallion (RCA version)  
Black Stallion Returns (RCA version)  
Chralie Brown Festival, Vol. III

Coma  
Disney Cartoon Parade, Vol. 2  
Dogs of War  
Doobie Brothers -- Live in Santa Barbara  
Elephant Man (2 discs) (RCA version)  
Faerie Tale Theatre: Goldilocks and the Three Models  
Firefox (2 discs)  
Flashdance  
Godfather (2 discs)  
Jane Fonda's Workout  
Magnificent Seven, The (2 discs)  
Meatballs  
Night Shift  
Officer and a Gentleman, An (2 discs)  
On Golden Pond  
Porky's II: The Next Day  
Rocky II (RCA version)  
Rocy III (RCA version)  
Romancing the Stone  
Saturday Night Fever (RCA version)  
Shaggy Dog  
Simon and Garfunkel - The Concert in Central Park  
Sound of Music, The (2 discs)  
The Spy Who Loved Me (RCA version)  
Still of the Night  
Sudden Impact  
Superman (2 discs)  
Superman II (2 discs)  
Swing Time  
Swiss family Robinson, The  
Tom and Jerry II  
Treasure Island  
True Grit  
Uncommon Valor

Thanks  
-Marlin

From: "Robert Brown"  
To: ceds@teleport.com  
Subject: Phantasm disc  
Date: Thu, 26 Jun 1997 14:26:42 PDT

Has anybody noticed that the Phantasm disc has a scene deleted from the tape version of the movie? (I haven't bought the deluxe laserdisc version yet to check to see if the scene is in it.) The scene in question occurs on side two, but I'm not sure about how far into the side it is. After Mike finds the time gate, at one point the lights go out and Mike uses a cigarette lighter to illuminate the room. As he flicks the lighter, he sees one of the Jawa-looking creatures very near his face, and he says something like "Oh, shit." This scene is not on my Embassy pre-rec tape of the film. It may have been in the Magnetic Video version that circulated in the very early 80's, but, again, I haven't been able to verify this.

Another strange thing about the CED is that the soundtrack has some very unusual "misplaced" audio. At one point on side one, Jody's car squeals out of the bar parking lot, and at the beginning of the next scene, you can hear a repeat of the squealout. There's another place where the audio is wrong, but I can't think of it now for the life of me. If anyone knows where RCA got their master for Phantasm, it may shed some light on this. If anyone would like to know any specifics about the various anomalies, e-mail me and I'll check the disc to get exact time references and specific info about the scenes in question.

From: David Potochick  
To: ceds@teleport.com  
Subject: DVD vs LD & CED

In a previous letter, I spoke about DVD being pixellated and the fact that it  
advertises itself as having better pictures than a Laser disc... Well,  
actually, in the long run DVD will have a better picture than Laserdisc or  
CED..... Because the DVD uses MPEG2 digital technology, it will never  
have lines or specks or dots go through the picture the way that LD's  
and CED's do..... So, DVD is one up on having the longest lasting  
pixellated picture without dots or lines..... However, for DVD picture  
quality..... I still have to say, "BLECCCH!!"

Later,

Dave.

Subject: Followup to previous Phantasm post  
Date: Wed, 02 Jul 1997 12:11:34 PDT

Since I had a few requests, here are the differences between the Phantasm CED and the tape version. I was working solely from memory when I did the last post, and, after rewatching my disc, I discovered that there is only one audio "misplacement." The scene that is missing from the tape and is on the CED disc is, I have been informed, also on the deluxe laserdisc pressing. But--for those of you (like me) who don't have the laserdisc, I've got a transcript of the missing scene.

First, the misplaced audio. It occurs on Side 1 of the disc, right as the time counter turns from 24 to 25. It occurs at the end of Mike's nightmare--there is about one second of the sound of a car screeching to a halt instead of the screams of the ghouls in the nightmare. This scene is immediately followed by a scene of Jody's car screeching into the parking lot of a bar, accompanied by the same audio from the end of the previous scene. So it's not, as one reader suggested, the RCA technicians forgetting to turn down a carry-over audio track from the master--it looks instead to be a mistake made when editing the RCA master. It seems that this is a likely time for a reel break, and the audio from the next reel was inadvertantly put at the end of the previous reel. Just a guess. By the way, this problem does not exist on my pre-recorded copy of the Embassy tape.

Now, on to the CED extra. On Side 2, right as the counter hits the 29 minute mark, a twenty-eight second scene occurs that is not on the tape versions of the film. What follows is a transcript of the extra footage:

Over a black screen, we hear:

Jody: Okay, stay together.

Mike: Wait a sec. I think I gotta lighter.

Jody: Quick, light it up.

Mike lights the lighter, revealing one of the dwarf creatures in front of him. Mike screams as the creature leaps on him, knocking the lighter from his hand. The screen goes black again as sounds of their struggle continue for a few seconds. Then we hear:

Jody: Over here--follow me.

We hear the sound of footsteps, followed by the sound of a door slamming. After a beat we hear:

Reggie: Jody, where are ya? Mike?

A growl fills the darkness.

Reggie: Oh, shit!

Thus ends "the dark scene." For those of you who have only a tape copy, it occurs about 72 minutes into the film, right after the lights go out in the gateway room. Immediately after the scene, the film cuts to a shot of Jody outside the mortuary, calling for Mike.

I hope this hasn't been too long-winded, but it's always a plus to find extra things on your CEDs--and due to your responses, I know there are apparently several Phantasm fans out there.

Subject: Expanded Vaporware Listing  
Mime-Version: 1.0

Fellow CED Collectors:

Going through some early 80's publications I've recently acquired, I found about 70 more titles announced for release on CED that appear to never have made it into production. These are mostly from the late '83 - early '84 time frame, and were probably canceled when RCA abandoned the system in April '84. The complete list can be found at the web site:

<http://www.teleport.com/~ceds/selectavision.html>

From: Jesse Skeen  
To: Tom Howe <ceds@teleport.com>  
Subject: Re: CED Digest Vol. 2 No. 26  
Mime-Version: 1.0

The scene in "Phantasm" that is missing in some versions was edited out by mistake by a rushed telcine job, they thought that it was just black space that was just a leader or something, not part of the movie. The current laserdisc version has director's running commentary that mentions

this when it comes on. I have this plus the CED and a copy of one of the later Embassy VHS tapes, I'll have to run all 3 simultaneously sometime to check out the sound discrepancies.

BTW has anyone seen/heard the Magnetic Video laserdisc of this movie? It's "electronically re-channeled" for stereo, the new disc was remixed for stereo so it'd be interesting to see how it compares to the old disc. (I kinda don't like stereo-ized versions of mono soundtracks, but that's another story.) I did see this movie on TV a few years ago, slightly edited, and it was in some kind of weird-sounding stereo. It sounded fake but the dialogue stayed in the center so it wasn't the result of those annoying "synthesized stereo" processors that a lot of TV stations used when stereo TV first came out (thankfully most stations here stopped using them a long time ago!)

On another note, does anyone else have the CED of "Scrooge" that is in stereo only on side 2? Side 1 has a stereo signal but the sound is completely mono, when I first watched it last Christmas I thought that was how the whole movie probably was, as there were a few older movies on CBS/FOX video tapes that were in "electronically re-channeled" stereo that produced very little stereo effect, but there was a dramatic difference in separation once side 2 started.

I find it pretty amusing that my 14 1/2 year old player produces decent surround sound while there are people out there watching recent movies on MONO VHS machines! Who's -really- nuts here?

"Our list of favorites will grow and grow- in stereo!"

I have noticed that a few scened in "The Black Hole" I remember seeing in the theatre have been cut from what is shown on The Disney Channel. There was a scene where the telepathic woman gets something in her eye, and Maxamillian has to take it out. And there may have been a cut in the scene where Max shreds his way though the book in to ...er...the "Phsycho" actor. Are these scenes present on the CED release?

From: David Potochick  
To: ceds@teleport.com  
Subject: More DVD / CED stuff

Chris White Emailed me and wrote.....

>All this anti-DVD crap from you. Hey I own CED, LD and DVD. DVD is  
>simply awesome. If you see spots or pixels or whatever then you must  
>be friggin' blind.

Well I'm not blind and I do see pixels changing on the in store demo.... This could be due to Quantization or Concatenation... Anyway.... DVD is here to stay... The technology behind it is really neat.... I may... MAY..... end up adding this piece of technology to my home entertainment system yet.... Despite all the bad things I've said about it... The discs are smaller than Laserdisc and there are a lot of really neat movies out on DVD right now.... My favorite being "Rock And Roll High School" with the Ramones..... I was amazed to see this out on DVD....

However one drawback I saw recently at a Best Buy in Illinois was a disk skipping and locking up.... So, obviously DVD still has this problem to a degree.... All Video disc media still can't solve the skipping or lock up problem... Hopefully they can correct this....

Later,

Dave.

Subject: CED collection for sale

Hi. I'd like to offer the following Collection for sale(I'd prefer to sell the whole thing at once). Just send me an offer. Also, anyone with experience in shipping CEDs, I'd appreciate shipping suggestions and tips. OK, here's the list:

"10"  
48 HOURS  
THE AFRICAN QUEEN  
ARTHUR  
BLADE RUNNER

BLUE HAWAII  
THE BLUE LAGOON  
BUTCH CASSIDY AND THE SUNDANCE KID  
CARRIE  
CASSABLANCA  
CAT BALLOU  
CHEECHY CHONG'S UP IN SMOKE  
COAL MINERS DAUGHTER  
DIRTY HARRY  
DRESSED TO KILL  
EASTER PARADE  
FIDDLER ON THE ROOF(2 DISKS)  
THE FRENCH CONNECTION  
THE FRENCH LIEUTENANT'S WOMAN(2 COPIES)  
FORT APACHE, THE BRONX  
GATOR  
THE GODFATHER, PART I(2 DISKS)  
THE GODFATHER, PART II(2 DISKS)  
GREASE  
HAROLD & MAUDE  
HIGH NOON  
HISTORY OF THE WORLD PART I  
JANE FONDA'S WORKOUT  
JEZEBEL  
THE LAST AMERICAN VIRGIN  
M\*A\*S\*H  
NATIONAL LAMPOONS ANIMAL HOUSE  
NEIGHBORS  
PRETTY BABY  
RAIDERS OF THE LOST ARK  
REBEL WITHOUT A CAUSE  
RICHARD PRYOR LIVE IN CONCERT(2 COPIES)  
ROCKY I  
ROCKY II  
ROCKY III  
ROYAL WEDDING  
SINGIN' IN THE RAIN  
SOME LIKE IT HOT  
A STAR IS BORN(2 DISKS)  
STAR TREK-THE MOTION PICTURE(2 DISKS)  
STAR TREK II-THE WRATH OF KAHN  
STAR WARS  
STRIPES (2 COPIES)  
TAXI DRIVER  
TRUE CONFESSIONS  
TWILIGHT ZONE-THE MOVIE  
URBAN COWBOY(2 DISKS)  
USED CARS  
VICTOR/VICTORIA(2 DISKS)  
WHITE LIGHTNING

YANKEE DOODLE DANDY  
YOUNG DOCTORS IN LOVE

Well, that's all of them. I'm located in the New Orleans area, so if you're nearby, we could avoid shipping charges. Thanks for looking!

Subject: CED Sightings on TV and in Movies  
Mime-Version: 1.0

Fellow CED Enthusiasts:

Whenever I'm watching a movie or TV sitcom from the early 80's I always look at any entertainment consoles that may be in the background to see if they contain a CED player. Well, I've never spotted a player in any of my viewings, so I thought I'd post to see if anyone else has. The closest thing I've seen is the original RCA Digital Command Center being used to control a TV in "The Wizard of Speed and Time" (filmed in '83/'84 but not released until 1988). Somthing else that has been happening lately, particularly with 8-Track tape players, is the appearance of old technology in current productions set in the earlier time period. Showing someone loading a CED into one of RCA's electric-loading players would be a great prop for a movie set in the early 80's.

From: Jesse Skeen  
To: Tom Howe <ceds@teleport.com>  
Subject: Re: CED Digest Vol. 2 No. 28  
Mime-Version: 1.0

Re: possible footage missing from some versions of "The Black Hole": This reminds me of the CED of "Escape to Witch Mountain"- an IMPORTANT scene looks to have been deliberately cut out! The only other place I've seen this movie was on network TV way back when; when the bad guys bring the kids to the big house and leave them in that big playroom with all the

cool stuff, the brother starts playing his harmonica and makes some of the puppets and toys in the room dance telepathically; meanwhile the bad guys are watching this over hidden camera in a room full of video monitors and stuff (I specifically remember a large reel-to-reel machine in that scene). On the CED, the scene fades out right when the kid first picks up the harmonica, I assume the song he played had some copyright snafu that made them delete the whole scene. This renders a following scene completely senseless- the next day the kids are confronted about their magic powers and are told "Don't try to hide it, we saw all that playing around you were doing" (I forget the actual dialogue there.) The way Disney does stuff nowadays, they'd probably take that scene out and deny it ever existed (like the altering the allegedly racist lyrics in Aladdin for the video release, and their Touchstone movie "The Program" had a major scene, the infamous "freeway scene" taken out in the middle of its theatrical release after someone was killed imitating it!) As for the DVD thing again, I'm afraid that any problems with it will be brushed off like it's no big deal; if you read some old magazines describing CED's skipping problem I've seen a few comments like "this is only a minor annoyance, and this is still a great way to get your own video collection", in other words RCA paid us to keep our mouths shut about it! I had a letter published in Video magazine recently accusing them of doing something similar with DSS; someone had actually written "I did still see some motion artifacts but they were very subtle and I'm sure most people won't even notice them." Their big DVD article last issue was a major butt-kissing session; they even made a big deal about how great the built-in subtitle feature was, so you can watch a movie with the sound turned down when you have to keep the house quiet. Gee, what a revolutionary feature, I've never seen anything that can display what people are saying on the screen, ever. Oh yeah, except for those closed caption things, but otherwise this is totally new. Sorry I'm rambling, I've been up all night!

To reply to the original poster's question about the version of "The Black Hole" airing on The Disney Channel, the only editing that appears to have been done to the film is the removal of every instance of the words "damn" and "hell." (With absolutely NO regards to CONTEXT! At one point they edited the old quote "Damn the the torpedoes, and full speed ahead" into just "full speed ahead"!!) The scene Daniel claims to have seen does not exist in either the TV edit, the original videotape release, or the Disney Channel version. Perhaps someone who owns the CED can comment if this scene is present (and if they used the same transfer that was used for the original videotape release).

Incidentally, I've begun work on writing an FAQ for the Black Hole, so if anyone has any information on this film, I'd appreciate it if you get in contact with me.

BTW: If anyone has a CED of this film for sale, or a CED player, please e-mail me. Thanks!

Denis

To: ceds@teleport.com  
Subject: Wanted: Rocky Championship Collection Box and Poster  
Mime-Version: 1.0

Fellow CED Collectors:

I'm looking for the Rocky Championship Collection box as well as the poster of Rocky that came packaged inside. This boxed set consists of the RCA releases of Rocky I, II, and III which are identical to the discs RCA sold individually. I already have these three titles, hence my interest in just the box, although I'll buy or trade for the complete set just to get the box (email me for my trade list).

The story behind this boxed set is a rather interesting one. RCA pressed vast quantities of monaural Rocky I's for the CED intro in 1981, and also pressed a lot of monaural Rocky II's. CBS came along and released Rocky I and II in stereo, leaving RCA stuck with their now undesirable mono inventory. In a classic example of miscommunication, both RCA and CBS released stereo versions of Rocky III at almost the same time, resulting in another inventory surplus. So the release of this boxed set was a means for RCA to eliminate their excess inventory of these three titles.

Rocky IV also exists on CED as a rare 1986 release. Although this is a CBS/Fox title, it was actually pressed by RCA, as the CBS pressing plant had been closed for some time when it was released.

Subject: DVDs  
MIME-Version: 1.0

While at The Videostation, Colorado's targets VHS and Laser Disk rental store, I overheard a conversation between the owner and sales reps from Pioneer. The owner said that on DVD rentals the life expectancy of DVD disk is about a dozen rentals, because the DVD is easily scratched. Apparently the coating is thinner than that on the Laserdisk and perhaps the higher laser beam frequency is more sensitive to defects.

P.S. Where can I get help on repairing a Pioneer PV-1000 Laserdisk player. It was made in 1983 and has a helium-neon laser tube.  
Thanks.

I have 5 RCA VideoDisc players.

I also have 400 discs.

None of the players work. The discs are OK and have the usual glitches.

My wife says that the discs are the best collection of movies that I have. So I really need to get at least one of the "400" model machines operational.

I also have a new "400" needle that I bought in the waning days of CED.

The main problems are (i)the machine will not "bight" the disc and engage and (ii)the transport will not take the disc in.

Is there someone in the NY area who still know how to feed and care for these cute dinosaurs?

Early adopters unite. You have nothing to lose but your money!

Subject: RE: CED Digest Vol. 2 No. 32

Since things seem kind of slow I'd like to open a topic for reader's discussion. Which films do you think look better in CED than any other format?

Two that I would like to nominate are:

"The Quiet Man" (Republic's "digital" [expensive] anniversary edition on laser looks dreadful. The colors are oversaturated and run together, while the CED looks very nice.

"To Be or Not To Be" (The Benny/Lombard/Lubitsch version). VHS copies seem to have been mastered from 16mm prints while the CED is sharp and clear.

Other films that looked terrible on laser originally (until they were replaced with better transfers) include: "The Thing" (1951) and "She Wore a Yellow Ribbon" (Pioneer definitely reproduced them from scratchy, incomplete 16mm prints); "The Searchers" and "The Wild Bunch" (current letterboxed laser editions are fantastic, but the pan & scans that were available for years did not do their sources justice--and don't forget, it was RCA & CED that originally restored "The Wild Bunch" to its director's cut).

To: ceds@teleport.com  
Subject: Worst side break

A discussion previously about poor side breaks leads me to a movie I recently watched 2001 A Space Odyssey. The side break between one and two occurs in the middle of the ship landing on the moon in the middle of the "Blue Danube" when the next scene is in the meeting room and would have been the perfect place for a side break. In addition the side is only 36 minutes long and the laser disc of the same vintage has the break as they are flying to the monolith 12 min later and is also a good place for a break. Even more unusual. The ending crescendo of the "Blue Danube" ends before the meeting scene in the original laserdisc version, the Criterion version, the letterboxed version, and the anniversary CAV version. In the CED version (mono) the music is still ending as the photographer takes pictures. Speaking of sound abnormalities. In "The Seven Year Itch" the syncing of the voices to the characters speaking is all messed up especially in the opening scene in the train station  
Just some musings....

Subject: Re: CED Digest Vol. 2 No. 30

All the comments about easter-eggs and various mastering anomalies reminded me about the first time that the freeze-4frames was used to verify the presence of something in a movie. Freeze frame was either non-existent or very bad on VCR's in 1977.

In 1977 a parody of Star Wars was released. It was called Hardware Wars by Ernie Fosselius. It has recently been released on video and I purchased a copy. In one of the scenes in the parody, the gang was looking out the front screen of the Millennium Falcon. Right in the middle of the screen was a large pair of dice, just like the ones in the '57 Chevy. You couldn't miss it.

Just for gags in the lab we freeze framed every scene like the one in the parody and sure enough there they were a small pair of dice in the middle of the screen. As I recall the dice were only in the scene for a very short time. Subsequent scenes did not have the dice.

I happen to enjoy a good parody and this is one of them.

"May the Force be with you."

Subject: History of VideoDisc

Picked up a book from amazon.com titled "The Business of Research- RCA and the VideoDisc" by Margaret B.W. Graham. It is an interesting story of the behind the scenes movement that ultimately led to the release and withdrawal of CED in the marketplace. One fact I previously did not know. I always thought that the diamond stylus had allowed increasing the groove density leading to 60 minutes per side. In fact RCA had been able to do this for several years but the sapphire stylus which only lasted for 50 hours broke even more frequently when designed to play the smaller grooves. They almost decided to release a 30 minute player which would play the 60 minute discs with a new cartridge, but decided against it. It is a fascinating book and was only 15.95 in soft cover.

>engage and (ii)the transport will not take the disc in.

Donald:

Both problems are probably due to function motor drive belt failure. Here is the text of a web page detailing replacement of this belt. If you have web access, the site below has photos to accompany the text.

--Tom Howe  
www.cedmagic.com

#### Function Motor Drive Belt Replacement

These instructions are for replacing the function motor drive belt on RCA's J and K series electric-loading CED players. Failure of this drive belt is the single most common reason why these players fail to operate. The function motor drive belt transfers the torque to load and unload the disc, so when it first begins to fail the player may eject caddies without unloading the disc, since the caddy wasn't drawn far enough inside to reach the latching mechanism. This drive belt also provides the torque necessary to rotate the function gear assembly to the various positions corresponding to Load, Play, Unload, and Off. So if the player, when turned on, takes a long time to enter Load mode where the access door is open and the LED display flashes L, then the belt is beginning to fail. It is not uncommon for a player that has been stored for a long time to never enter Load mode when turned on because the drive belt has completely failed and all the function motor can do is endlessly spin. All J and K series players use the same function belt, RCA Stock No. 157592, which corresponds to the more readily available PRB No. SCB3.6. If you have difficulty finding this belt, you can mail me a dollar to the address at the bottom of this document, and I'll send you one.

(1) To begin installation, remove the two philips screws from the back of the cabinet top and remove the top by lifting from the back. Locate the function motor gear train in the left rear of the player as shown in figure 1.

(2) The function motor gear train is partially concealed by a small black cover held in place by two philips screws corresponding

to the screw holes indicated in figure 2. Remove these screws and the gear cover, being careful not to lose the felt washer that fits over the 2nd reduction gear mounting shaft.

(3) Slip the combined 2nd reduction gear and pinion off the mounting shaft, which will fully expose the 1st reduction gear and pulley as shown in figure 3.

(4) If necessary, the combined 1st reduction gear and pulley can be slipped off its mounting shaft to free the old belt. Put this back on prior to installing the new belt.

(5) Install the new belt by slipping it around the pulley, then stretching it up and over the function motor drive shaft.

(6) Place the combined 2nd reduction gear and pinion onto its mounting shaft making sure it seats all the way down, so the mounting shaft slightly protrudes.

(7) Place the felt washer over the protruding end of the 2nd reduction gear mounting shaft, then replace the gear cover, making sure the felt washer doesn't fall off before the screws are fully seated.

(8) Replace the cabinet top by holding it at a 15 degree angle while aligning the front edge before lowering the rear to the closed position.

(9) Replace the two philips screws to secure the cabinet top.

Subject: Re: CED Digest Vol. 2 No. 34  
Mime-Version: 1.0

Here's a good reason to have "The Bette Midler Show", from Embassy Home Entertainment, which is a shot-on-video special for HBO from 1976. The beginning has the "Special Presentation" intro that HBO used during that time, it has some really cool music! I recently played the intro over and over about 10 times, it is just so cool! I think HBO still shows their famous movie intro (the metal HBO logo flying in space) but this one is

so dated I'd be surprised if they still used it. HBO is like CED videodiscs in a way because to me it's something that served a useful purpose when it was new but is now no longer needed. I had it for a while just because my roommate wanted it, and I hardly ever watched it. They take forever to get new movies when they've already been available on laserdisc for a long time, and they never show anything in letterbox format! They sometimes put voice-overs over the end credits too, this is completely unacceptable and led to my dumping cable altogether! I remember when it was cool just to see recent movies "on TV" with no commercials, but now that there's so much prerecorded stuff out there it's just not necessary to have movie channels like this. Lots of people have at least 2 VCRs now too, so they don't even need HBO to record movies from when they can just copy rental tapes.

What amazed me about the Bette Midler special was that it was in true stereo! Stereo TV was miles away in 1976, I don't even think they did FM simulcasts back then either (before they had stereo TV I remember a lot of cable and regular TV shows, mostly music-oriented, being simulcast on FM stations so you could hear them in stereo.) So does anyone know the story on why they did this in stereo, and who actually got to hear it when it was first shown?

I have a few other videotaped shows on CED that I'm amazed are in stereo, Neil Diamond's "Love at the Greek", which looks like it was made for network TV since there are fade-outs for commercial breaks, was also made in 1976 and is in stereo. But what really wows me is "Who's Afraid of Opera," which there are 3 volumes of, which was produced for television shot on video in 1973 and is in stereo! What's the story on this one? BTW, I have some "phony" stereo CEDs too, "The First Barry Manilow Special" is labeled "stereo" and has a stereo signal, but is really in mono. That was also a TV special, from 1977. "Fraggle Songs," a collection of songs from the HBO show "Fraggle Rock," is labeled Stereo but is really in that processed synthesized stereo that a lot of TV stations used during mono shows when stereo TV first came out (thank god most of the stations here quit doing that! It was annoying as heck!) If you listen to just the left channel of this disc, the sound is mostly low-pitched and the right channel is higher-pitched. The CED as well as the first release in other formats of Disney's "Pinocchio" uses another kind of this synthesized stereo.

Subject: 2 CED Players For Sale!!!

-2 CED Players For SALE -

SJT - 090        \$30.00

Very basic model. Has play/pause, fast forward and stop functions.  
works great!!!

SJT -090 \$15.00

Unit is missing the face plate but I have labeled the buttons. It works great!!!

I just found a Hitachi VIP1000 model CED player for \$5.00 at a flea market in mint condition. Never used, never taken out of the box, the needle guard and shipping screws were still in place and it works great. So, now I have two CED players for sale.

Later,

Dave.

Jay Jones writes,

My SJT 400 will take in a disc, but then it "hangs up." It won't play and it will not eject. Any ideas about how to solve this problem?

Subject: RCA Selectavision SJT 300 Not Playing

I recently purchased an RCA Selectavision SJT 300 at a thrift store. I would be very grateful if someone with some expertize on these machines could give me some advice on how to get it running. When I brought it home and took off the top I discovered the loading mechanism belt was gone and the CED turntable had come out of position. I replaced the belt and put the turntable back in what I am assuming is it's proper position. When I powered the machine up it went into the L mode. The front door opened enough to easily insert a CED. I inserted the CED and it seemed to load properly. At this point, with the top off so I could observe what's going on, the following happened;

1. As soon as CED loaded the needle moves into position over the CED, the - - indicator came on and for a short time the Side 1 indicator came on. After about three seconds the Side 2 indicator also came on. So, the window read - - and both side 1 & side 2 lights were on.
- 2.If I press PLAY nothing happens.
- 3.If I press REJECT the needle moves back off the CED, but nothing more happens. - - indicator is still on, Side 1 & 2 still on.
- 4.If I press POWER off, the machine powers down. When I press POWER on, the needle moves into position again. All indicators the same, - - in window and Side 1 & 2 lights lit. REJECT once again moves the CED back.
- 5.If I manually move the large gear on the left side of the machine (where the belt that controls the loading mechanism is) I can get the front door to open and the L load light to come on.
- 6.With the load light on nothing happens when I press REJECT. Nothing happens when I press PLAY. Nothing happens if I press POWER once. However, when I press POWER a second time the front door closes, the needle moves into position, the - - lights come on, the side 1 & 2 lights come on and I'm right back where I started from.
7. The CED never spins. I can't get it to go into the play mode and I can't get it into the Unload mode. I now have the CED stuck in the machine.
8. All gears seem to be in excellent condition, no rods are broken or bent, can anyone tell me what I might try to get the machine functioning properly? I

would appreciate any advice. Thank you.

Subject: The Future of CED's

As it has been over a decade since the first 'CED' player first rolled off the assembly line and many have been intreauged and mystiqued by it. As well since RCA Corporation is no longer an entity being bought out by General Electric and then subsidized to Thompson Consumer Electronics the world of the 'CED' has slowly decreased in size to near extinction. Many at Thompson Consumer Electronics (TCE) have never heard of the 'CED' concept perhaps due to the time that has passed since the systems were in manufacture.

Since the employees or perhaps even the employers at TCE have never heard of the 'CED' concept or do not want to remember, it might be possible to join together with fellow 'CED' enthusiasts to purchase the rights to the

design of the systems and perhaps even the Disc Stamping Unit that in myth is stored at TCE. Imagine what could be done, if all of the 'CED' enthusiasts were to join together and give rebirth to the 'CED' concept.

Many believe that failure of the 'CED' was the invention of Japan Victor Company's VHS Deck, however this is a false truth. For example Betamax Video Recorders and Players were better in video quality except for the length, however they were under sold by VHS due to bad marketing strategies. This applies to RCA and other manufacturers of the 'CED' players and discs. If 'CED' enthusiasts and users were to unite and purchase the rights as well as the equipment could accomplish amazing feats.

Some would say that the purchase of 'CED' system rights would not be feasible for one person or perhaps a few. Yet there are not just one or a few who use the 'CED' systems.

Subject: Simple(?) Repair Advice For RCA  
Date: Sun, 28 Sep 1997 14:43:18 -0400  
X-MSMail-Priority: Normal  
X-Priority: 3  
MIME-Version: 1.0

Hello everyone,

First of all, I would like to thank Tom for his CED site. It has been informative and most interesting. The links to other sites are also very helpful. It is because of his site that I have an interest in CED technology and may start an active collection of discs (I have only five thus far).

I have two questions regarding my two players to which I was hoping to get answers.

I recently picked up an RCA, SFT 100 W (I already had a Zenith player, but wanted to compare the differences and maybe use the Zenith as a spare).

It seems to be in good condition, but the turntable does not rise when the door is closed (lever moved up from Load to Play). It does spin when the lever is brought down from Off to Play (with a disk already having been previously loaded), but it still remains at the base position, maybe 1/4" below the disk. I need to know what may be operating incorrectly / need repair, how to remove the turntable (if necessary), etc.

Regarding the Zenith, it works fairly well, but stutters consistently at certain positions of the counter, mostly between 30 and 40. When I say that it stutters I mean that the video and audio jump slightly forward, sometimes losing a word or two of the dialogue, and sometimes this stuttering repeats several or more times before the play settles back to normal. [By the way, the Zenith's configuration/design is very much like the RCA, and they take the same stylus cartridge].

I thought this problem might be due to a slipping stylus-transport motor belt (my phrase, it is the small belt driving the worm gear assembly) or maybe to uneven resistance as the stylus transport assembly is moved slowly forward (suddenly encountering less resistance, and thus the lurching forward and skipping of small segments of the audio/video). I figured that perhaps the worm gear or gear train might need lubrication to solve this, but don't know which type lube to use and how sparingly it should be applied, etc.

Any insight anyone can provide will be most appreciated! Thank you.

Best Regards,

---

John -- jleonard@csc.com

Subject: Pioneer cartridge laservision system?  
MIME-Version: 1.0

I apologise for asking another laserdisc-related question in this CED magazine, but again I feel this would be the best place to get a knowledgeable answer:

My friend has a Pioneer laserdisc player he picked up used somewhere, and he's looking to possibly sell it. It is a large unit, that plays both laserdiscs and CD's. It also has an opening on the bottom left where some form of cartridges can be installed, but he has none of these cartridges

with the unit. He thinks there may be a cartridge that allows the player to play turbografx-16 software.. but he's not sure. I've heard of a Pioneer unit called a "Laseractive" player.. Would this be such a beast, and if so, what capabilities does it have? Unfortunately I don't have a model # handy, but I'll try to get it next time I'm over there. Also, how hard is it to find the cartridges this unit uses?

Thanks..  
Larry

Subject: Question stylus...  
MIME-Version: 1.0

Regarding defective Stylus Cartridges...

I have a fair amount of stylus cartridges from the SGT series and SJT series players which are defective.. I have been keeping them.. I would like to know how to recondition them? Some techniques have been suggested

to me by others. People who have experience with these things.. One method described to me regarding the bending of the end of the stylus slightly above the stylus tip up above the area where the copper ribbon contacts the end of the stylus... I have been told by several people that when nothing else works.. that this sometimes brings life back to the cartridge when you've got nothing else to loose.

Which brings me to the question?? What other techniques are others aware of that restores or repairs a stylus??? Surely, there must be "someone" who knows of a method, or a technique that is workable...

It seems perfectly logical to me that there is indeed a way. It seems somewhat obvious that there would be some sort of manipulation, or repairing technique of some sort..... Would anyone out there care to enlighten everyone else?????

Subject: Re: CED Digest Vol. 2 No. 40  
Mime-Version: 1.0

I would be all for becoming a "part-owner" of what remains of the patented system, just so that whatever equipment still exists (like the disc-pressing unit) is taken care of instead of thrown out as "junk". I still think the most important future consideration is making sure there's enough parts to keep the existing players working for as long as possible. It WOULD be really cool to be able to make a few new discs just for fun, but I don't know what practical use that would serve ("Men in Black" on CED???) Remember the format died because there WAS no practical use for it, since you already had laserdiscs, and even tapes, that were better quality than CED. But that's the reason I like it so much :) Is there anyone with graphics capabilities and a lot of free time on their hands who would want to make pictures of what the covers of current movies might look like on CED? I could already imagine "The Lion King" complete with the red and yellow circle around the picture that RCA's Disney movies all had. I have a picture someone made of what the Jurassic Park laserdisc cover would have looked like if they still used the "MCA DiscoVision" label!

I've also wondered if CEDs were still being made today if they would have made the caddies transparent, like most audio cassette packaging is now. I also wonder if they would've eventually put stereo signals on every disc regardless of whether or not the movie was really in mono; I'm kind of annoyed that the mono films with the later RCA opening didn't have that in stereo. (When one TV station here started broadcasting in stereo, they turned the signal on ONLY for stereo programs, and kept it off the rest of the time! They often forgot to turn it on sometimes too, they finally kept it on all the time after I complained!)

One more thought about the magic word "Digital": The cover of Gone with

the Wind says "Digitally Enhanced for Stereo", and the back cover of Purple Rain mentions the album is available on "Compact Digital Discs". I have a Columbia House 8-track of the 1982 version of "Fantasia" (where they re-recorded all the music) which says "New Digital Recording" on the cover, the only 8-track I've ever seen to have that word on it!

Selling 5000 ced disc

I've got over 5000 disc to sell. Pls send your want list. The more disc then the better. I have to drive a round trip of 5 hrs to get to

the storage location on the weekends to pick them up... so the more orders I get in the more I can get them picked out and justify my trip (Gas, Time, Work, Wear and tear on me and the Car).

I am trying to put together an inventory sheet of what I got.. It will take a while, because it will be very tedious, and meticulous to do. That will take some time.. (and work)

I'm asking \$6 a disc

'''''''''' \$10 for new sealed (shrink wrapped) discs

I will try to figure a way to give a better deal for those who order Large numbers of disc. (I'm still figuring that out)

I've got dupes of certain titles...

Many dupes of others..

the buyer pays for the shipping...

If some people want 20 disc picked at random (and sent out in a box) I could do that to (if someone wanted that)

I'll try to work with you the best I can..

Sent your list.

ph #423-524-4143 or e-mail me... I work and go to school so leave a message on my machine if you have to... thanx.....

Subject: The Future of CED's \* Part Three

Dear Fellow CED Enthusiast's,

As in the last CED Digest, I stated there being ways to help bring back the CED. If you missed that article, there is a brief and revised edition below.

Join me, Daniel P. Cayea, Operations Officer at Telecom Technologies Incorporated in this almost futile fight. Write me on how to send donations, write or call Thompson Consumer Electronics, even better call or write General Electric who bought out RCA Corporation in 1987, and we will 'Bring this good thing back to life!' One thing that I have learned from past experience from other entertainment medias is that if complains enough, they eventually give in to demand. I will try to keep you posted as events unfold.

Daniel P. Cayea  
Telecom Technologies Incorporated  
2841 First Street  
Lyon Mountain, New York

The CED Future

The capacitance electronic disc or ced as it is known has been a long forgotten technology to many who were once aware of it. It has long been

obsolete since it was stopped being manufactured in 1984 by RCA Corporation. Although RCA Corporation is long gone, as well with the CED dream that the company carried, there are however many persons who still have CED machines and the discs that go with them. They are abandoned, with no one to turn to ever.

Since RCA stopped manufacture and they were bought out by General Electric, users of CED discs and machines had no place to turn since GE or Thompson Consumer Electronics (The GE subsidiary that controls RCA today.) do not support CED. However this can change and will change if CED users join together.

VHS, Laserdisc, and Satellite Television have taken today's market by storm leaving little or no room for obsolete medias such as Beta, CED, and even reel-to-reel players and recorders. With these new technologies out there today who wants and old and potentially outdated system like CED. Even with this truth there are least 200,000 people in the United States who have CED players that are still functioning today. How long will they last? This is the question that has long eluded many, since neither GE or Thompson will provide support or parts for these machines, in time they will eventually wear out. It has been rumored that before RCA Corporation was bought out, they had compiled a large stock of replacement parts and needles. This is true, but the supply is dwindling and will (estimated by the year 2005 at minimal usage) soon be out. How exactly will this be stopped? At the current time it cannot be stopped.

The only way that this diminishing supply of CED parts and supplies can be restocked is to find someone to manufacture the parts and supplies. No one carries or supplies them anymore. This maybe a truth for now but can soon change. The estimated 200,000 CED users left could join together to create a financial fund a purchase the rights to the capacitance electronic disc system, including disc manufacturing stampers. Most people would think that this is an insane act, if one person would attempt to purchase the rights, they would be correct. However 200,000 people could accomplish such a feat with no trouble whatsoever. So it is only a matter of time when CED user's join together to re-establish the use of CED into the entertainment world.

OK as a hobby it's fun. But the quality is really lousy. Why would anyone want to spend money to press discs that don't have half the quality of a laserdisc or a DVD? I'd join in just to get someone to fix the machine since I have a bunch of them and a bunch of discs that I can't play. Would love to hear from you if you get any serious replies.

Subject: RE: Pioneer LaserActive  
Mime-Version: 1.0

Larry:

I recently put up a web page on the Pioneer LaserActive system for another project I'm working on. This consists of a photo of the CLD-A100 player and Pioneer's intro press release from 1993. Here's the URL:

<http://www.teleport.com/~ceds/tech-info/laseractive-press-release.html>

This press release bears a strong resemblance to RCA's initial output on the CED System in 1981; i.e. much higher expectations than what actually came to pass. By 1995 LaserActive was dead and the local Incredible Universe sold off their players for \$299 which included the Sega PAC, Pyramid Patrol Mega LD, Disney's Fantasia Box Set, and an 8" LaserActive promotional disc. The LaserActive titles were originally \$120 or \$180 (3-D releases), and these eventually got reduced to \$30. The basic player was widely available through liquidators like Damark for a while, but I believe they are all gone now. The Sega PAC is by far the most common, and in addition to the TurboGraphx and Karaoke PAC's, Pioneer also released a PAC-PC1 for computer interfacing. In the end, only three LD-ROM titles and fifteen Mega LD titles were released, with the two 1995 releases, "Blue Chicago Blues" and "Goku" being quite rare. I had a very difficult time locating "Goku", which is a shame, since this title really showcases what LaserActive was capable of when a lot of effort was devoted to the programming (a hint to DVD developers).

> support CED. However this can change and will change if CED users join  
> together.

How? I have read in the FAQ that RCA expected to sell 500,000 units in their first year, and sold that many by the time they cancelled the format. The problems you have to contend with, namely, are the multiple style styluses used in the various manufacturer's players (I own both a Toshiba VP100, and a Hitachi player, both use different style cartridges). Why would RCA want to even consider resupporting a format that is over 15 years old, and hasn't been sold for more than 10? What's the point? How many people have junked their players since then? How many people that respond to the petition will actually buy supplies? The sole purpose of a company is NOT to supply parts for a hobbieist. Read that last sentence again. The sole purpose of a company \*IS\* to make money. There is little possibility for RCA to make money on the CED, in fact, they never did. Why should they extend their disaster?

> VHS, Laserdisc, and Satellite Television have taken today's market by

> even  
> reel-to-reel players an recorders. With these new thecnologies out there  
> today  
> who wants and old and potentially outdated system like CED. Even with this

I think you just answered your question about whether RCA will decide to support CED again. It's about as futile as an owner of a TI99/4A expecting Texas Instruments to manufacture software for their computer again.

> The only way that this diminishing supply of CED parts and supplies

> re-establish the use of CED into the entertainment world.

Two problems I see are immediately evident with acquiring the disc stamping machine...and this will become evident to you as well if you read the information on the CED magic page regarding the manufacturing of CEDs.

First, there's a LOT more that goes into "stamping" a CED. First, you must have a metal master, this master is plated with another metal (zinc, I believe?). Where do I buy these? The first step in the production of a CED is to have a master cut on an enormous cutting recorder, using a one-inch master videotape (or some other high quality format). The master is tested, then a mold is made from the master. THEN the actual pressing takes place. After the pressing is done, the discs, which ARE STILL NOT PLAYABLE, must be doped with carbon (this is where the capacitance, in capacitance electronic disc comes from) in a special type of tank. Now, the final steps theoretically could be dropped (i.e. applying silicone lube and putting them in a protective caddy).

The second problem with your argument is that all of the above I have mentioned is beyond the scope of any CED enthusiast. The process requires a clean room. Metal discs used to form the master can't be purchased (at least not feasibly), and on top of that, if ANY copies of say, Mars Attacks, have to be approved by the intellectual owners of that property.

While I agree that your idea sounds fantastic, and I would love to see something like this happen...there's just no way that something like this could be feasible to a group of hobbyists. It would be a nice piece to a museum collection, but beyond that it's not very practical. Think about it: there were only two companies producing CEDs when they were available, RCA and CBS, obviously other companies considered it a flop.

The CED Future  
Part IV, Finance, Prospective, & Use

One could wonder why exactly spend money on an obsolete system when there are other better systems out there. It is not a matter of better, it is a matter

of nostalgia and want. Of course in no comparison is CED greater than Laserdisc

or the newly developed (D)igital (V)idea (D)isc. However it has to be asked what would the CED system be like today. For example, since IBM made their first personal computer in 1981 the capacity and reliability of diskettes has increased. This of course has to be taken into effect with any disc, pretty much,

including the CED. Since the development of the disk by IBM in 1981, the capacity and reliability has more than tripled and is continuously increasing.

How exactly does this apply to CED? Even in the slightest you might ask.

When RCA finally released the system in 1981 for public use, the capacity of the disc was 60 minutes (30 minutes per side). I have postulated a system called E-CED (Enhanced Capacitance Electronic Disc), that coheres to the same theories and works just as the floppy disk does. In realistic comparison if RCA

Corporation would not have been bought out by General Electric, that the capacity of the CED would be 6 hours per disc (3 hours per side). This due to the

inevitable increase of the density of grooves on the disc. As well as with the

enhancement of the stylus that would of eventually taken place. Since RCA was

bought out and no future development occurred while other development in almost in the same field did, it would be easy to enhance the CED now. This strikes another question. How could we enhance and how could it be paid?

Compared to other systems in 1984, CED was ahead of VHS and just behind Laserdisc. Now in 1997 it is slightly behind VHS, way behind Laserdisc,

and astronomically behind, DVD. Of course think of this, the CED Player in comparison with a Laserdisc player has fewer complex components. Replace each simple component with a more complex component and a better system made. Anyone with the proper technological and electronics skill and training

could improve this system to a point in which it is better than VHS and Laserdisc again. In all admission it would be difficult perhaps even impossible

to enhance the CED system to a point in which it would be better than DVD.

Even with this there are still some of you who are still skeptical about this

and  
have certain beliefs.

There are indeed some who state that the reason why the CED failed was that there was no practical use. True? No. This is false. The CED failed, not physically, but economically because of weak marketing strategies. One could sell small white plastic blocks that have no apparent use if they are properly marketed. It is a known fact that RCA Corporation spent more time working on quality equipment than marketing it. (If only all companies were like this.)

It is a personal opinion that RCA did a great job on the development of the system, yet they didn't have the best resources for marketing in which that is why they failed. Getting back to the original notion of practicality, the CED was relatively practical and it did have a use, it was just not the most properly marketed system at the time. RCA Corporation spent most of their time developing rather than making the system look good for purchase.

Those who have technological and electronics training, I ask you to contact me with your thoughts and suggestions on how to further develop the CED system or enhance the performance of the current systems by emailing me at: dpc16@aol.com or writing me at:

Telecom Technologies Incorporated  
P & O Systems

To: ceds@teleport.com  
Subject: CED Revival

I read with some interest the effort of some to revive or procure CED technology for those who currently own the machines. The same problem faced LaserDisc owners in 1981 when DiscoVision Associates withdrew from active participation in production and distribution of LaserDiscs. (Actually DiscoVision Associates still exist and they even have a web pages! Their only business is the collection of royalties due.) It was Pioneer who jumped into the scene and kept LaserDisc going for the last 16 years although that now appears to be coming to an end. I was thus surprised when in 1984 RCA following traditional American business practice opted out of CED, not because they were losing money but because they were not earning money fast enough. They sold 100,000 players in the first year instead of the 200,000 planned and had sold 500,000 by April of 1984 when they pulled the plug. At that time there were only 100,000 LaserDisc players. I expected a Japanese company to step in since CED disc manufacturing was extremely profitable for RCA, which is why they promised to continue production into 1987, though they stopped in 1986. But no Japanese company did step in and had a group of interested American investor wanted to they could have stepped in and purchased RCA's player and disc manufacturing facilities for a great price.

It was not to be. I am sure if they had CED would have continued to increase in market penetration. But the time to do that was in the late 1980's not now. I am sure with storage space at a premium the CED pressing and mastering equipment has been destroyed. Also since CED used technology very similar to LP technology that was very prevalent in the past but not now, getting simple raw materials would be difficult.

I have recently finished reading "RCA and the VideoDisc" by Margaret Graham.

It is a fascinating view of the release and demise of CED from the corporate view. Suffice to say RCA was counting on CED starting off very big and continuing to build, when it didn't the naysayers were in charge from as early as 1982 and pressed for its withdrawal and finally won. They wanted and got the tax write offs that were so big at the time. Remember that when RCA was bought out by GE there was not a consolidation of two giants but a dismemberment and sell off of RCA parts to gain corporate profits for GE.

Such were the 80's . Don't make money by making and selling things, but by buying and selling companies. I will follow with interest the CED musings in this publication.

Re: Pioneer Laseractive:

I never compared this to CED, but I have 2 of Pioneer's "Zoom" laserdiscs, which are sent out periodically to retailers (got them from a VideoConcepts store when they were closing them all) One is almost entirely a demonstration of Laseractive and one can't help feeling sorry for the guy talking about all the research and commitment Pioneer was putting into it. I never saw it promoted to the public very well, but they talk about it here like it might be "the next big thing." The only Laseractive disc I have is "3-D Museum" which I also have LCD shutter glasses that work with it. I'd like to get some game discs if they ever show up cheap enough; that's what I think doomed this system as well as the laserdisc-based arcade video games in 1983-84- since the main parts are prerecorded, there's really only one way a game can go since you're playing with the same footage every time, and that gets old really fast. The system was a rip-off too, the player itself cost about as much as a really good LD player only it didn't have auto-reverse, and you couldn't play any games with it unless you paid another few hundred bucks for the "packs" (which both could've been built into the machine making for a really good unit- Turbographix and Genesis games!) To top it all off, the game discs were around \$200 each when they first came out!!

Where in history is CD-I (Interactive) going to fall? I recently got a player at Fry's (formerly Incredible Universe) for \$15 (no that's not a typo!) I'd never expect to find one that cheap even at a thrift store! The manual it comes with starts out with "You've just purchased one of the best-supported, best-backed products available today, which will provide you with many years of enjoyment." This was a great example of a product in search of an identity- was it a game system, cheap home computer, educational device, or what??? Looking forward to finding some bootleg MPEG movie CD's though, I've heard they have some movies that are still in theaters available on these things. The only legitimate stuff I've been able to find is porno, the motion on the 3 discs I have is strange looking and I can't tell if it's the source material, bad mastering, or if that's how everything looks on MPEG-1 discs. And yes, I was watching them for the plot and the acting ;) I also have the Space Ace game that uses the MPEG card, and it looks pretty good but animated stuff often holds up better under "digital" situations- noticed a bit of "weave" and "jump" in the film though, which I thought would get lost in a sea of blocks so that impressed me. I saw "Star Trek" playing in a store a long time ago and it looked pretty bad, I don't have any of the more 'major' films Philips put out that would probably better show how good or bad the overall quality is.

With laserdisc having already been out, and now DVD, this format has pretty much always been pointless, its only advantage apparently being that they're incredibly cheap to make, which accounts for the majority of discs to be either bootlegs and/or porn.

You may not know this, but a great many of the CED disk assemblies were injection molded right here in western PA by Precise Plastics. They did a lot of the original development work on the molds. As was mentioned in the last CED e-mail, surely the format would have continued to evolve and many of the shortcomings would have gone away. The last CED players were evidence that the art was improving. My SJT-400 has much less problem with skipping than the older players, as well as some really fun features like freeze frame.

The thought of a clear caddy was not likely, though. The plant manager where I work was with Precise when they were making those caddies and he tells me that they were made of crystal styrene. Crystal styrene is clear but somewhat brittle so an additive was used to make it impact resistant. That additive also makes the resin opaque. Try dropping a hammer on one of those clear audio cassette shells then the same on a CED caddy and you'll see why they did it.

If you have a white caddy (Precise didn't make the colored ones) that no longer is usable, cut the two halves apart. (They are sonic welded, so taking them apart will ruin them.) Look for the little round circles that are the mark from ejector pins used to push the part out of the mold. If there is a "P" on one of them, it came from Precise.

Because most if not all of this kind of equipment came from vendors

rather than directly from RCA, it may be a stumbling block to putting CED back in production. Molds like this can easily cost \$100,000 or more if they have been scrapped. With that said, I would like to support any effort to see if we can find a way to preserve and even possibly resurrect CED production equipment.

Well, as for the person wanting the rights to cutting CED's I don't know. You'd have to go through a record pressing company and a lot of other red tape..... I would like some new movies on CED though.

Jurassic Park  
Ace Ventura  
The Mask  
Disney's "Hercules"  
and many others...

Okay, is the CED principal used for the disc on the Voyager space craft??? I'm just curious of this. It says that the disc contains video information and audio information. Is this disc printed in CED format or some other format??? Does anyone know??? I'm just curious.... I think it would be pretty neat if the voyager space craft actually had a CED on it.

So why does the CED have to spin so fast??? Why couldn't they have just pressed them at 33 and 1/3 rpm or something slower??? I'm just curious.....

Later,

Dave.

My understanding is that RCA \*was\* manufacturing discs in 1987; the last major new title apparently was "Back To The Future." Also, the reporters who cover the consumer electronics industry -- several of whom I know fairly well -- were pretty much in agreement that RCA was \*losing\* money overall on CED, not merely missing their return-on-investment targets; they were selling the players below cost in order to build a customer base for discs, but didn't do enough of that to recoup their losses.

> curious.....  
>

The CED really doesn't spin THAT fast. Comparitively speaking, the floppy disk drive spins at 300 RPM, and the Laserdisc spins at a max of around 1800 RPM.

There are a few reasons that the discs spin at 450 RPM. Firstly, if the disc were to spin too slowly, for example, the 33 1/3 RPM like you mentioned, the information would be packed too densely and the information couldn't be extracted back off of the disc.

Here's a little math :)

The CED media has the following characteristics:

Each revolution contains 4 complete frames of video (as well as sound)  
If you look at the disk you can see this fact because the disk is subdivided into 8 sectors (NTSC is an interlaced format, so two sectors are required to make a single frame).  
CED's are approximately 12 inches in diameter  
approx " of this is actual recording media.

CED's have 9500 grooves per inch

Okay, now if we keep this in mind ~3.25" x 9500 (note: we use 3.25"

instead of 6.5 because we don't want to count the grooves twice) gives us ~30875 grooves per side. On top of this 30875 grooves x 4 (4 frames per revolution remember) gives us the total number of frames per side... 123500. We know that the NTSC format is 30 frames per second, so we divide 12350 / 30 ... 4116.7 seconds per side, divide by 60 and we get approx 68 minutes of video per side (please keep in mind that the measurements are approximate which accounts for the discrepancy).

Now, we can learn something really interesting from this by comparing it to the laserdisc. On the laserdisc, there are only TWO sectors per side as opposed to eight (so there is only one frame per revolution). Ever wonder why the CED doesn't have a still feature? It's because the disc doesn't spin fast enough for it. On the laserdisc, it is possible because after it has finished drawing a complete frame, it is already back at the beginning of that frame...the disc has made one complete revolution. However, on a CED, a single frame takes 1/4th a complete revolution, and therefore it hasn't reached the beginning of the frame (it has to skip three frames to get to the still frame again).

So why didn't the designers of the CED make it spin around 1800 RPM like the Laserdisc? There are probably two or three major reasons for this: First, since CED is a contact medium, it is likely a higher RPM would have caused the needle to resonate and skip around and would therefore make it unreliable. Second, it would reduce the amount of playback time significantly without increasing the groove density (since without changing the groove density you would have only 15 minutes per side). Third, by increasing the groove density to compensate, it would have required a finer needle and would make the media more subject to damage by scratching and make either the needle or the disc wear out significantly faster.

Food for thought anyways. :)

The CED Future  
Part V, Capacitance Fund & Userís Corporation  
By Daniel P. Cayea

To be completely honest with you I havenít received any suggestions for enhancements of this nostalgic and antiquated system. In this I had to change the title of this part from "System Enhancement & Reproduction" to what it is

now. A

response to the last post of the "CED Future" in CED Digest has raised a good question. The feasibility and realistic nature of restarting this media? To some it

isn't there, and to some it is. I was however somewhat unclear about what I meant about the restarting of this media. As I have learned, in which I have known about it for sometime that it would not be financially and realistically

sound for a large corporation to restart a potentially disastrous entertainment

media. Starting the media again now, on a large scale wouldn't be feasible, but

just go along with the ideas stated below as well as some theories.

Tom Howe has stated in his frequently asked questions about CED, that there were approximately 750,000 players manufactured. Also estimate that over

the years that half (50%) of them have become broken or destroyed leaving about 375,000 players and owners of the players, that is if for each person there

is only one player. For this if each of the 375,000 people were to donate \$5 to a

trust that could be managed by Tom Howe, (just a suggestion, since he is a very

trustworthy individual) that would leave 1.875 million dollars in the fund.

This

amount could definitely be used by any hardware and equipment that is still available for use by us, the CED enthusiasts. The money could also serve for a fund for

research into enhancement of "our" system. I say "our" system, since there are

only a select few of us who refuse to let it die. We have adopted it, the CED

system is our so called "electronic" child. Perhaps we cannot make CED the most

flashiest, best system on the block, at least we can help sustain it further.

Speaking on another question... If there is equipment that can be purchased and we (as in the possible 375,000 of us) purchase it, where would we

put it? Now, before any conclusions are drawn, I am not saying this because of

this idea being somewhat based in my company's hometown. My small company "Telecom Technologies" is based in Lyon Mountain, New York. This town had a once large mining operation that was closed down in 1967. There are

still however several large buildings that remained. One in particular, which has

been run down over the years, would be a prime candidate for storage and perhaps research of the equipment. The building is five stories high, and

has an

available elevator shaft. It is though in need of work, plumbing, heating, and electrical. There also have been those who have voiced that what of the dangers of mines. Approximately all of the mines have been permanently sealed, and those who haven't been sealed are nowhere near this building. One benefit of this though, is that the building has a solid concrete infrastructure and could relatively cheaply be fixed from the town. I leave this issue relatively short and ask for your criticism. As in the next issue I will discuss the role of Thomson Consumer Electronics (RCA) in all of this. Thanks for the interest.

From: return  
To: Tom Howe <ceds@teleport.com>  
Subject: Re: CED Digest Vol. 2 No. 42  
MIME-Version: 1.0

could not but help notice the comments From Geoff on digest vol.2 No. 42. It's the classic argument between Skeptics and optimist. You can do anything if you put your mind to it. Why try to discourage others from doing it?? If they want to try, then they have a right to try. Actually, it can be done. We have made great advances in Electronics technology since that time. Smaller, cheaper, more powerful, more efficient, better quality stuff that could be used to redesign the machines to play even better, more features, higher quality stylus's, better playback quality, and modifications that I'm sure probably are even already on blueprints sitting still in a filing cabinet up there.

Why discourage others from trying to help themselves??? You did point out the fact that RCA "ran out" on all of these people, so why on one hand are you down casting and stating that they are being foolish by pursuing what you refer to as "Futile hopeless" attempts to help give some progress and improvement of the situation of the owners of this format??? Everything is not as always cut and dry when viewed by many perspectives...Yours is one perspective, and their perspective is another.

SO WHAT!!! They have a right try. I don't think they are naive or unaware of the problems that they would encounter in this project. I think they are aware of problems that would have to be overcome. I think somebody should try. They told the wright brothers, "If God had meant for men to fly they would have given him wings." Well, thank goodness

the Wright Bros. ingnored those types of perspectives, and forged forward and took the challenges of the problems facing them.

It applys to this to. Maybe it does not seem practical or pragmatic to you? But to others, they might have some vision on how to see things in a larger perspective.

Let them try!!! Don't have a defeatest attitude. Let them try!! I mean after all, your not afraid that your (or others out there) rarity list will be threatened by new pressings of say for example "XXXXXXX" titles that people on this page say or create the illusion that a particular title is rare????.... I think every titles that was put out on the title data base that Tom has should be repressed out new by order or request So, that we don't have all of this contention, and pretentious competition over titles. I could even extend that argument even to the level of certain models of players too (need I say more).

I mean come on guys!!! this stuff is getting pretty ridiculous. We are all Big Boys (and Girls) out there. Its time to stop being petty, and start having a little spirit and adventure on this matter! The point has been well made: "We as C.E.D. people will accomplish things in our best interest if we STICK TOGETHER! Divided we will certainly fall!!! (one by one). If we don't organize! then we will be victums of the calendar!! as time goes by, parts run out, Stylus's need replacing!!, Rubbler Belts need replacing! I.C. chips are sensitive to static elec.,

I personally think it would be nice to be able to get a new pressed copy of a movie title on the old CED list.

New movies from the 90's

Tombstone	Batman
Terminator II	Beavis n' Butt-Head
Independence Day	New concert footage of Alternative Bands from the
Contact	90's MTV "live unplugged" Video's
Star Trek Next Gen.	The Beatles Anthology (whole set)

..... Just use your imagination... make up your own lists!!!

There are no problems, only solutions!!! and if we keep moaning like we are, then its not going to happen!!!

If somebody wants to try to get this format going again, so let them!! I don't see any harm in it!!! If someone can then let them!!! Usually the people who say it can't be done are the ones who are first in line ahead of everybody else when somebody else does do it....

Lets here from some people out there with some real vision!!!!!! on this thing!!! Lets think positive about this!!!.....Lets here from some of you out there!!!!!!!

To: ceds@teleport.com  
Subject: Let's bring it all back!!!

Yah, I'm behind bring the CED back!!!..... Yah, what a neat idea!!!

While were at it, lets also bring back the 8 track!!! Just think of how many people have 8 track players out there. They're tucked away in garages and basements, even at flea markets... We could buy the 8 track recording devices and mass produce 8 tracks....

While were at it, we could also make great games like Street Fighter and Tokyo Wars for the Atari 2600. Just think of all of the neat graphics!!!

Hey, think of all of the people that have old IBM 8088 computers.... We could market a a version of MYST or Sim City 2000 for them..... Then we could mass produce the Commodore 64 and TI-994A again.

Okay, I think I made my point clear..... Back to CED digest.....

Although we'd love to have new CED's I just don't see it as possible with CD and other laser/disc technologies.... RCA has it's own DVD player now and I think formats are getting smaller instead of larger.

Later,

Dave.

Subject: Re: CED Digest Vol. 2 No. 42

Dave asked why the Ced disks spin so fast, i belive it is because of the 6Mhz( 6,000,000 hz) or so frequency of the video + audio signal. At 33 1/3 rpm these high frequencies would not register in the grooves, because the waves of the signal are so minute that a higher surface to stylus speed is required for the cutter to engrave these high frequencies. The 33 1/3 is acceptable for audio because the highest frequency audible is around 20khz (20,000 hz). I suppose it would be theoretically possible to record video signals at 33 1/3 rpm, if the laquer was of ultra-high quality, ultra-fine, to the point of being smooth on a microscopic level, used in conjunction with a precision cutting head that was exremely powerful at the high frequencies. But its a hell of a lot easier to spin the disk at 400rpms though. I belive that the disk on the voyager is nothing more than a copper lp, if even that much, how would some alien be able to play it? was there a player on board? and ive also wondered if it would be playable after all those years of collecting cosmic dust. maybe its just a kind of hood ornament! (or belt buckle!)

From: Tom Howe  
To: ceds@teleport.com  
Subject: RE: Voyager Interstellar Record  
Mime-Version: 1.0

The records on the Voyager probes did include both audio and still images, but rather than being a CED, the disc is actually two copper audio LP masters bonded back-to-back and plated with gold. These were mastered at 16 2/3 RPM, providing a one hour playback time on each side. Side 1 contains 116 images, greetings in 60 languages, a whale song, and music; while Side 2 has 60 minutes of additional music. Side 1 faces inward, being well protected from micrometeorite impact, and is estimated to still be playable after 1 billion years.

A stylus and cartridge are stored on each spacecraft, and the gold anodized aluminum cover the disc is sealed behind has pictorial instructions for playback etched into it's surface, using the transition time of the hydrogen atom as the basal time unit. B & W images require 8 seconds to play back, while color images require 24 seconds, and the recovered image is somewhat similar to an NTSC television frame, consisting of 512 scan lines arranged vertically rather than horizontally.

There are a few of CED tie-ins related to the Voyager project. The CED title "Star Trek: the Motion Picture" contains a mock-up of a Voyager probe, but no gold cover is visible on the unit, and the Voyager 6 designation is now an historical inaccuracy, as NASA launched only two Voyagers. The two companies that later mastered CED's, RCA and CBS, both provided technical consulting on the mastering of the Voyager record. Herbert Schlosser, then president of NBC, was a production consultant on the record who later became RCA's vice president of VideoDisc programming. He can be seen in the book RCA and the VideoDisc , and is also the gentleman seen standing in front of a wall of VideoDiscs in a publicity photo RCA distributed widely in 1980 leading up to the CED System introduction.

For more info on the Voyager record, consult the book Murmurs of Earth (1978, Carl Sagan et. al.), or visit the Golden Record portion of NASA's Voyager web site at this URL:

<http://vraptor.jpl.nasa.gov/voyager/record.html>

Subject: The CED Future, Part VI & Personal Notes

The CED Future  
Part VI, The Role of Thomson Consumer Electronics  
By Daniel P. Cayea

As Tom Howe pointed out in his updated CED FAQ's, perhaps someday Thomson Consumer Electronics will release a commemorative disc on the twentieth anniversary of the CED system. Well, the twentieth anniversary is in 2001, so far I haven't seen any movement on their end. As the 750,000 possible CED users are struggling to keep their equipment up we see a problem. A problem that now unless we ourselves purchase the rights, that only Thomson can help us with.

Life is life, business is business. Of course that is the way corporate America thinks today, and that is no different compared to General Electric or Thomson Consumer Electronic either. For whatever reason General Electric just

had to have RCA Corporation back in 1986, it is a corporate fact of life, big companies or richer companies have to swallow up little or poorer companies. Now that RCA is gone, we find ourselves scurrying to get whatever help or equipment that we can find. As with players, movies, and stylus cartridges dwindle away, we have to find a solution. This is one of the other reasons why

we need to join together and get this technology started again. This technology is just like an old boat, the longer we wait without any action, the sooner we

sink. It has been said that Thomson in all probability still has Disc Stamping

Station as well as some other machinery for the production of CED hardware, such as stylus cartridges. From a relative point of view, purchasing these items from Thomson Consumer Electronics should be easy. For they have no use for it at all, however we do. For I, just being one person, do not have the financial resources to do this. Yet, the almost 750,000 possible CED enthusiasts do have the resources to accomplish this. Write Thomson like I have on information of the equipment for

CED that they have. Eventually they will respond to the numerous requests that

they will get, only if you write or call them, like I have. Since this part is relatively short and sweet, I should go over the other parts that I have come up with and tell you what they are about and what CED Digest they are in. Part One & Two are general overviews of the CED Future are posted in Vol. 2, No. 40. Part Three is brief overview of Parts One & Two, also with some suggestions on how to restart the CED system, and is posted in Vol. 2, No. 41. Part Four is a report on the financial feasibility of restarting the CED system, how and why we should do it, and is in Vol. 2, No. 42. Part Five is a report on a possible users fund for the CED system and some suggestions on how to get whatever hardware is available, it is in Vol. 2. No. 43. In the next part, Part Seven, I hope you will all help me with, by sending me comments on your results on contacting General Electric or Thomson Consumer Electronics, as I am attempting to get all that I can out of them, I hope you can do the same. I also plan on commenting on Telecom's National Capacitance Disc Library and how it can help, if we cannot succeed in our efforts.

Telecom Technologies Incorporated  
National Capacitance Disc Library  
2841 First Street  
Lyon Mountain, New York USA 12952-0090

Personal Notes:

As some of you have commented on the futilism of trying to restart the CED format, I thank you for your criticism but I ask for support in which I would give if you were starting such a project. Again, I thank you, personally I would prefer positive ideas, suggestions, and criticism, but all is welcomed. Again, my company Telecom Technologies has started the 'National Capacitance Disc Library.' It is a profit library which I hope to collect all available titles in multiple copies for those who wish to loan them, that way we do not have to compete with each other for available copies.

Thanks, Dan

The CED Future, Part Seven  
Financial Feasibility

Many of you have given constructive criticism to the cause of restarting the CED format. Most of you believe that it is a futile cause, which from many perspectives of view is. However, after research I have discovered this.

The estimated total cost of purchasing the patent rights, equipment, and manufacturing tools is \$2,000,000.00, this is estimated remind you.

According to a survey that I conducted there are 300,000 users of the format nationwide. That is \$7 per person if everyone joins in. It is my personal opinion that \$7 isn't allot of money at least to me, however 2 million is. I ask all of you for help. As 'Geoff' (geoff@ml.sprynet.com) said that it isn't worthwhile, but on the contrary it is. As Chemfish (chemfish@utkux1.utk.edu) wrote "Why fight off each other for what is left?"

This is a good point which I would like to get across. I have found it harder and harder to obtain replacement parts and that includes stylus needles for players. We had better get moving on this project if we are going to and we must. Or we may find that are hobby can do is just collect dust.

I have also started the National Capacitance Disc Library here in my home town as part of a corporate project here at my company. I invite you all to stop at my web site and check out the Disc Library Page on it. Thanks. <A HR EF="<http://members.aol.com/dpc16/ttia/telecom.html>">Telecom Technologies \* Lyon Mountain Online.

As I may have not said before 'I thank all of you for your criticism and for your help'  
With any luck we will not have to worry about running out of time. Let's beat the calendar shall we?

Friends,

Perhaps rather than re-creating the whole process through your own company we should see if one of the specialist video companies would be interested in releasing on CED.

The key is the ability to master and to press CED disks.

That is the really tough issue.

Does mastering and pressing equipment still exist or can they be easily rebuilt?

And of course the whole issue of CED stylies remains unknown.

There is also copyright issues relating to material to be released on CED. (This would less of a problem for an exiting video company).

In any case goodluck ....

Subject: CED Digest Vol. 2 No. 45

Date: Mon, 10 Nov 97 15:50:00 est  
Encoding: 37 TEXT

I am new to the CED Digest and am interested in the discussion of breathing new life into CED. I just bought a CED player and have collected a few discs. Although the few experiences I had with CED while it was new involved skipping discs while watching them, I must say I am quite impressed with the quality of CED over even modern day VHS prerecorded fair. As an avid Beta user since 1984, I wish this format would have won out over VHS. In my opinion Sony really had a chance to overcome VHS and even modern laser disc with its' ED Beta VCR; but dropped it for fear that it would hurt their industrial 3/4" sales! As an ED Beta owner, the quality of the format is breathtaking, being able to record at laser disc level of quality.

I have been working for General Electric for a couple of years now and as you may already know, the consumer electronics division of RCA was sold to Thompson Consumer Electronics group shortly after GE purchased RCA in 1986. RCA and even General Electric products are made by Thompson. This may give CED a chance because with the company mandated margin levels for their divisions, CED wouldn't stand much of a chance of coming back here at GE.

I have seen the estimated number of CED users. Are these based on past sales or actual people actively using CED to this day? Probably the most feasible way of pressing discs would be to prove to a small production company that there is a market awaiting the new release of titles on disc. However, I have read of small duplication companies that are willing to take all of the responsibility of releasing prerecorded Beta tapes but are consistently turned down by the big studios. This despite a fair amount of loyal Beta users with interest in obtaining new prerecorded fair.

I can remember back in the early eighties that big studios were anxious to get down to one format to release movies on. With RCA pulling the plug on CED and Beta dying a slow death at the hand of VHS, Pioneer was smart enough to create a niche for its' product by vastly improving the quality of the format and fiercely standing behind it; almost alone. With DVD giving laser disc a run for its' money and the number of Beta owners still interested in that format, it will take some creative thinking to bring CED back to life.

From: Jesse Skeen  
To: Tom Howe <ceds@teleport.com>  
Subject: Re: CED Digest Vol. 2 No. 45  
Mime-Version: 1.0

While I just have to laugh at the thought of putting out new movies on CED, I have heard that there is at least one professional videotape format that was used decades ago that is now impossible to play as all the machines have broken and irreparable. I hate the thought of that happening to any format.

Therefore, when I got into CEDs my first worry was having my stylus wear out. It was so much that I started watching only the discs I REALLY wanted to see first, in case the player died and I couldn't watch any more. But I started combing the flea markets and thrift stores and have gotten some spare players, and in cases where the seller will only sell the discs and player as a package, if the player is mono then I take the stylus out of that and store it away in a plastic bag. I also have 2 brand new "old-style" cartridges that I got at a mom-n-pop TV shop, so I don't think I have to worry about my CEDs being unplayable for a long time. I've heard the SJT-series (motorized loading) players had styluses that were designed to last a VERY long time, someone claimed they would last forever with normal use; that's why there's no access cover like on other players, and once you get the player open it's still hard to get to the pickup arm and the stylus. I prefer my SGT-200 however because on "Dual audio" discs it lets me play them in true stereo. "Audio B" was really the out-of-phase sound like how the surround channel in standard Dolby works, so you can get some pretty interesting effects playing these in stereo. The music in Jane Fonda's Workout is recorded weird so you can turn off Jane's voice, and the CBS/FOX discs I have that are English with Spanish on the second track are quite funny in Dolby Surround. The whole Spanish soundtrack of "Snoopy Come Home" is just a microsecond off from the English track so the music echoes strangely if you're playing this in surround, and the dialogue also has an interesting effect- the English voice speaks first then it's like someone sitting behind you starts translating it into Spanish. I've always noticed how "spazzed" Spanish voices in cartoons sound, this is certainly no exception. I laughed when I figured out they were calling Charlie Brown "Carlito", it reminded me of Al Pacino's movie "Carlito's Way". I don't quite think I'm up to handling "North to Alaska" or "The Adventures of Robin Hood" this way yet though.

But back on the subject of keeping equipment alive so the world can always play these, something SHOULD be done to make sure that all CED players becoming unusable never happens. Enthusiasts of old 78 RPM phonographs make needles you can use with those, the CED stylus is a little more complex but I think someone can figure it out. Anyways, I'm off to the flea market at the Drive-in hoping to find some more CEDs!

The CED Future, Part IIX Forming of a Corporation It has been two weeks since I last spoke with you about the possible restart of our obsolescent yet wonderful entertainment media. As many of you have pointed out in your constructive criticism you have said 'It would not be financially feasible to start the repressing of discs again.' This would be true after careful examination. I do however propose this to those who are interested. A forming a corporation mainly titled 'Capacitance Corporation' and unseemingly catchy as that is. I propose that we join into corporation that would perhaps not forward this technology but stop or at least slow the obsolescence to a mere crawl. Before we find our players and discs to be worthless. I ask those to think seriously of this proposal. Dan Cayea Telecom Technologies

Just some more food for thought on the "Bring back the CED!" project.

Does anyone know just WHERE the CED pressing devices might be located?

I remember a few years ago on the classic video game group... some guy had a great idea that all the classic gamers make a pilgrimage to New Mexico (Or was it Arizona) and there they would do an archaeological dig for a ton of overproduced atari 2600 games (ET, Swordquest Earthworld) for fun and for souvenirs. So, all these elaborate plans were made on how and when everyone would bring their pup tents and there pick axes to the site for the dig.

Only problem, no one could figure out just WHERE the location was. So it was about 6 months of wishful thinking.

Does anyone know where it might be? If it existed? Is there only one machine? Or what?

Also, on another note from a skeptic... I think the number given as the number of people still using CED's... is overstated. Even if it was not.. I don't think people who aren't on the internet should be counted! How are they to contribute anything if they don't know? I would guesstimate the number of people who are CED users and are on the internet at what... 100? 200? Maybe less than either of those?

I'm not against this whole deal, I think it'd be swell.. but, I say cut through some feasibility discussion and have someone do the leg work and find out where the pressing machine might be if it still exists. Because, if there is no machine.. what's to do.. make another? Not likely.. it probably takes a huge obsolete machine just to build the huge obsolete machine that is used to press the obsolete disks that we like so much.

FIND THE MACHINE

The CED Future: Part Ten Forming of a Corporation In the last few digests it has been pointed out, about the feasibility of restarting our old, obsolete, but great system. After extensive research it has been found that publishing current films would be outside a realistic grasp. I do however believe, as well as other who believe, that it is realistic and possible to restart the manufacture of diamond stylus needles for our players. Recently I asked those who would interested to form into corporation with me so that we could pool resources and start this project. I recieved little response and I do thank those who did respond. I was asked that among those who would participate in such a corporation, who would manage the money. It would be necessary to decide among ourselves to nominate a person who would let be known their capabilities of forming a corporation. In this there were also some questions that were asked and I would like to answer them now. What would the name of the company or corporation be? This hasn't been finalized and won't be until it is absolutely sure that 1.8 million dollars can be secured for the starting of the project. Who would manage the money? Either an accounting firm selected by the head of the corporation, or the corporation would manage the finances. Who would run the corporation? Among us who would join into corporation, we must decide amongst ourselves who would be best certified to fulfill the position of CEO. If there are any other questions, please don't hesitate to ask. The CED Future: Part Eleven (V1.0) National Capacitance Disc Library & Corporation Notes I have written to you for ten previous times now asking for support and those who have offered I am grateful for your help and hope you stay tuned with my articles on Tom Howe's CED Digest to stay informed. I have started a library through my company Telecom Technologies, and as the header might indicate it is called the National Capacitance Disc Library. The mission of this library is to accumulate several copies of every title released in the CED Format for loan by any person with a CED Player. This library is not a non-profit organization. There would be a charge for loaning discs, which would be a relatively small fee. This small fee would cover inventory, shipping, and maintenance costs of the library. If anyone can make a donation either discs or players to the library, it would be appreciated. On the same note I would like to thank Bill Blasjkowicz and others who made donations to the library. If you would like to loan a film from the library send your request to cayead@westelcom.com with the name of the film and publisher (RCA or CBS). I will respond to your request whether or not we have it available and what the fee will be. Onto another tune dealing with the corporation of CED users. I suggest a name 'Capacitance Corporation'. It has come to my understanding that no company uses this name and it is somewhat catchy. Those who were interested in joining into corporation, please email me, so I can email with you the proper informaiton. -Dan Cayea -Telecom Technologies & Capacitance Corporation

I have been reading the different opinions about the feasibility of bringing back the CED format. I work in the television industry and I would agree that I can't imagine that there would be any movie companies that would even consider allowing their films to be released on the CED format. It just wouldn't be cost effective for them.

I think talking about releasing new films on CED is alike to longing for audio recording to be released on 8-track. I love both of the formats, but the charm of them is that they are obsolete and so many people consider them junk. That's why it's so fun when you find a nice stash of CED's in a thrift store that hundreds of people have probably walked by and asked, "What the heck are those?" The fact that people are donating these to thrift stores says something about their value to the general public. They are one step away from just being tossed in the garbage can.

I do, however, think that forming a company to manufacture new parts for the

existing players would be a feasible idea. A small electronics manufacturing company might be very interested in taking on this project for a sales potential of a couple hundred thousand units. I think that's where the efforts should be concentrated, not in bringing back movies on CED. Does anyone out there really want to pay from \$25 to \$35 for a movie released on CED? They were \$25 when the format was alive. My guess is that if they were ever to be released again they'd be considerably more today. To me, it's much more satisfying to find some original films in near mint condition for 98 cents each! I just picked up 40 movies from Goodwill that are obviously from a private collection because they look and play superbly. 98 cents apiece! That's what collecting CED's is all about. The thrill of the hunt. When you decide to start a company to manufacture parts sign me up. I'll gladly pay my \$10.

Got a question for everyone: How many of you, when buying discs, take them out of the covers to check for condition and/or if it's the right movie, or play the first few minutes as soon as you get them? Part of the appeal of my CED collection is that there are literally thousands of hours of material that I have never seen; one of the biggest allures of the format is not being able to see the disc too (just like under normal use you would never see the spool of tape inside an 8-track.) I like to be surprised when I pick out a movie I haven't watched yet and know nothing of what it's about. However, I just ran into a disaster. Going through some of my old VHS tapes recorded off TV, back when I was so poor I had only one VCR and had to tape movies off independent TV stations, I was watching some of the commercials with my closed-captions turned on and a promo for a showing of "Hard Country" came on. What was funny was that the master they were using was captioned, so whatever captions were present in the clips they were showing showed up on the screen. This station always used movies in their original format, unedited (complete with bad language and stuff until they got a ton of complaints; they're now a Fox affiliate) and I'd never seen captions on any of these; so I got out my CED of "Hard Country", which I'd been meaning to watch anyway since it looked like an interesting movie, and it turned out to be disc 2 of "Never Say Never Again!" This was the first time I had gotten the wrong movie when trying to watch one; the only other time was when I had 2 copies of "Arthur" and one of them turned out to have "Game of Death" inside. I have no other copies of Hard Country though so I'll just have to keep an eye out for another copy. Does anyone else do what I do and just await surprises, or do you check the disc right away to at least make sure it's the right one?

Dear Fellow CED'ers:

As part of my company project to enhance and re-enact the CED format as much as possible, I have started the National Capacitance Disc Library, a profit organization that I have developed to build it's CED resources to great extents for access by all those with CED Players and Interest. Currently the NCD Library is small and few resources but plans are in the making to reverse this. There are however some catches about people loaning materials from the library. More information can be obtained by subscribing to the NCDL Newsletter by sending an email to [cayead@westelcom.com](mailto:cayead@westelcom.com) with the words SUBSCRIBE NCDL in the subject box. More information can also be obtained by visiting the temporary web site at <http://www.westelcom.com/users/cayead/telecom/ncdl.html>, please excuse the long URL, but it is temporary.

Thanks,

Dan Cayea, TTI

> players. Recently I asked those who would interested to form into

Here's another "negative" comment, or constructive criticism if you will.

I don't really think it feasible to manufacture the needles as well! For one thing, I can't think of ANY manufacturers making stylus for phonographs let alone CED players (there is definitely a surplus of

stylus for phonographs around). For one thing, a CED stylus is NOTHING like a diamond-tipped phonograph stylus. It is many times more complex. It is cut a very specific way in order to let it ride on several grooves unlike a phonograph stylus. Secondly, it has a titanium electrode which extends into the groove. This is much smaller than the diamond tip. There is a connecting wire that is attached to a gold-plated point contact. There are three pieces of magnet used for tracking, and a rubber stabilizer on the back. There is a cylindrical hollow aluminum tube used to hold the needle to the cartridge. There's also a spring used to retract the needle when loading/unloading the cartridge from the player. That's a lot of various parts to assemble! The only other alternative would be to cut down on the number of parts necessary to manufacture by refurbishing cartridges. Even still, it seems rather cost-prohibitive.

The CED FAQ states that, "Note that to date it has been less expensive to buy a working CED player than to buy a new stylus cartridge (my range has been \$5 to \$30 for used players vs. \$45 to \$70 for new stylus cartridges)." Now, if it costs \$45 to \$70 for a new stylus from BACKSTOCK that's at least 10-15 years old...how could it be economically feasible to manufacture a new cartridge (indeed several models of cartridges, since all the different brands use a different style cartridge) for the much reduced user base of today?

Subject: Digest entry  
Priority: normal

Well, here is another topic for discussion for the digest. The bring back the CED campaign is interesting (1.8 million dollars! That would almost pay back my school loans) but perhaps you guys have some thoughts on shipping disks..

Everyone knows that if the disks get stacked too high the sheer weight of the disks can cause the outer case to mash the disk and possibly scratch and damage it right?

But, just because you put the disks 'upright' in a box doesn't really mean anything when you think about it... I asked UPS about 'This side up' and they told me 'no way'... they said the boxes are tossed, rolled down belts, and what not with absolutely no regard for 'this side up' labels. So, if you have your disks neatly stacked 'upright' they may soon be neatly stacked on top of each other once the box is turned over.. and since you stacked them all together thinking

they are safe, they really aren't.

So - I've been thinking about this... Why not just stack the disks about 4-5 at a time, and then put something to pad the four corners of the disk, and then stack 4-5 more? If you open the case and inspect the amount of space outside the circumference of the disk but inside the corner of the outer case you will see it's plenty of space a wad of paper, a piece of styrofoam, etc. Plus the left and right edges of the disk are solid plastic.

Do you see what I am getting at? The disks can only be crushed in the middle.. so if the outside where there is no disk is padded right then the pressure from a stack of CED's can be distributed to the corners on each stack of five or so disks. Same concept used with those t.v. stands that distribute the weight of the set more towards the edges of you entertainment center so it doesn't bow in the middle.

Anyways, something to think about! I'd like to hear why that will or won't work. Of course, no way to no really know whether it works or not unless you want to take pictures of the disks and record the play quality, ship them to yourself along with a control batch and then re-check to see if there is any damage. But hey, it's fun to theorize right??!

Subject: Bring back CED? How about saving what we've got?  
Date: Mon, 24 Nov 1997 06:58:03 PST

Tom, I'm concerned that the effort by your CED group is misplaced in trying to spend time and money to resurrect the CED format. It cannot be done. However, there IS a format that is dying before our eyes -- or maybe I should say being killed off before our eyes. It is the laserdisc format. If your group wants to support a disc, why not try to keep the laserdisc from going into extinction? Companies that are pushing the DVD are currently trying to make EVERY audio/video format obsolete. They want the DVD to replace laserdiscs, VHS tapes, CDs, and audio cassettes. Partly because the DVD has a little technical edge in some areas. But the push is mostly a desire to make money. Can you redirect your group (or expand it to include laserdiscs?) Thanks!

Subject: Re: CED SERVICE TECH CENTER!!  
MIME-Version: 1.0

Guys listen up:

Lets carefully consider this point. Lets assume for a moment that for what ever the reason the CED operation is not started back-up again (whether the reason is because of cost, lack of interest, lack of will, lack of practicality, lack of unifying everyone or whatever).

Then, this is something we better do, and we can do, and I think we can get the agreement of all!, that what we "CAN" do is create under the same ROOF is this:

We need a "C.E.D. SERVICE CENTER!!!

We need a telephone support line of Technicans to TELL or advise us how to Troubleshoot and repair our Machines!!!!!! Now guys, there is no sense in so many people out there with machine problems with nobody to turn to!!

If you have got a collection of disc and your machine "CRASHES" what are you going to do then!!!!!

you need an office or an operation set up in conjunction with the people (in some way shape or form) that will be making replacement styluses and spare parts for these machines!!!

in addition to this,,, we could use a "Competent" Service center set up of Technicans!! who know how to work on our Machines!!!!

We, need to seek out and contact either "Retired" or used to be employed RCA techs who really knew how to work on these things. We need a phone line set up for tech advice, or the option of sending in your machine to be repaired!!! (for a reasonable fee or other arrangements- workable).

I don't believe it fair to all the rest of the people out there who are trying to and want to maintian there machines to not have any resouces to rely upon when they are trying to figure it out!! Its not fair for

just a few out there to know how to fix something on a machine and others don't!! There needs to be an open and fair outlet for all people to be able to repair their machines with good technical help for those people (I'm refering to you and I).

We all know the problem of "Current Service Tech's" Not knowing how to work on the machines, and then trying to charge an arm and a leg if that!

This can be done!! its practical!!! Its feasible!! its workable!! and I think its time it was done!!! There's no sense in this stuff!! there's no excuse for this going on the way it is!!!--

And for those out there that are "Brushing" this off right know are being Foolish!!! Your machine will break down sooner or later (whether

its mechanical or electronic!!) and then what are you going to do?????(you can't just look for another machine every time this happens!)

Prehaps, we first need to worry about getting the organization going first that will AID or help us keep the existing machines running with parts and ""GOOD OLE FASHIONED service Tech's we can rely on!!!!""

We need to get this going atleast!!! ...

I want all of you to reply and provide some "constructive" input to as how we get the ball rolling on this.

Lets try to start making sense on this..

We need a Service outlet for our Machines (with the spare parts we are talking about right now).

As the old saying goes, "WE NEED SERVICE!!!!!"

Lets get ourselves together on this! (can we atleast do this much!!!!???)

Subject: New VideoDisc Article  
Mime-Version: 1.0

Hi All:

I just came across an article in the October 1997 issue of Popular Mechanics titled "Think It's New? Think Again!" that mentions SelectaVision. This article compares DVD to the earlier formats, and discusses a needle-based format from 1941 that I wasn't even aware of. This format used 10" discs rotating at 100 rpm to produce 1 minute of B&W video per disc. In a photo, a lady is shown operating a giant video juke box-- the intended market for the short playing discs. This was reprinted from the December 1941 issue, so the advent of World War 2 ended any plans to market the system.

The CED Future  
(The NCDL Newsletter, CED Project)  
Part Twelve: One Step Closer  
By: Daniel P. Cayea

For eleven previous updates I have written about the 'The CED Future'. This time I write to tell you about my discoveries in the finding CED manufacturing systems and hardware. Many have made many suggestions that the public interest corporation, 'Capacitance Corporation' that we have for the project of keeping our system ongoing. Some of the suggestions that were made, were such that our PIC (Public Interest Corporation) offer an electronics company an offer to remanufacture diamond stylus cartridges. I have contacted several electronics companies, such as Digi-Key, whom haven't heard of our cartridges and hence they wouldn't say anything about the possibility of remanufacture.

Among the other questions that you have asked me through your replies to 'The CED Future' or to your constructive criticism, such as where is the pressing machines that RCA had, or would we go along in the enhancement of our system? I have some answers and suggestions. As for the disc pressing machine which has been put lower on the list of priorities, as I am sure that somewhere in storage at Thomson Consumer Electronics it lies. However I jump to other question about, how can we enhance our obsolete media.

>From my personal understanding in the system, the video and sound signals are derived from certain conductors (loosely speaking) in the needle relay the signals to be deciphered. How does this apply to the enhancement of our system? I have a project that I would like all of you to help me with.

According to Tom Howe's FAQ on the CED Magic series of pages, that the standard revolutions per minute (RPM) for the RCA CED Player is 450. Others have suggested that since our media is a contact media that it may not sustain a higher number of RPM's. I opt this, that those with broken players and useless stylus cartridges try to increase the RPM number of the turntables by some means or another, load the needle into position. Increase the revolutions per minute until the needle is no longer stable on the disc. In what I mean by stable is that the needle will smoothly ride the groove of the discs. I figure after increasing the RPM's to a certain amount that 10 seconds before instability is reached use that RPM number as the highest stability point. I have done the experiment and have found some promising results. However before I release the results, I'd like you to perform the same experiment if possible during your free time and send me your results as well. After getting at least 5 different results I will publish them in a future edition of the CED Future, or post them in general in CED Digest. It is seriously figured that if the RPM level for the discs can be increased, the playback time of the disc is increased as well as video & sound quality improved.

On to another subject in our quest to improve our nostalgic system. The footwork of improvement. I have read many articles of constructive criticism on this project. I have read of those who believe that this project is futile, and I have read criticism about those who think that this project is positive and novel. I thank both parties for their

constructive criticism, however footwork is what is required. Over the past few weeks I have done several projects and contact several organizations and companies reporting my results, yet haven't gotten any results from those who believed that this is the novel project. I conclude that I must have support either physical or financial from those who also agree with the plans of my project. Support is not your responsibility for this project, yet more promising results in less time would occur if you could offer your support. Again I thank those who have offered your support and I intend to keep you updated as much as possible.

To: ceds@teleport.com  
Subject: RE: Stylus Cartridge Manufacture  
Mime-Version: 1.0

The diamond tip of the CED stylus will probably be the most difficult obstacle to overcome in re-introducing the production of stylus cartridges. Here's a summary of the steps involved in its manufacture:

- 1) From natural diamond, prepare .025 x .025 x .2 cm stylus blanks.
- 2) Polish a flat face on the blank for electrode deposition.
- 3) Clean the blank in a hot oxidizing acid bath.
- 4) Rinse in high purity deionized water.
- 5) Atomically clean by baking in a near vacuum at 1300 deg. C.
- 6) Sputter titanium on the polished face in pure argon at a power density of 60,000 watts per square meter.
- 7) Fashion the tip into the proper shape by running it around a keel-lapping disc.
- 8) Cut a 140 degree angle into the tip by running it around another lapping disc.

RCA had to invent the oven in step (5), as no vacuum oven capable of that temperature had ever before been needed. The lapping discs in the last two steps were something like a coarse VideoDisc with a uniform groove, and had their own unique mastering process.

RCA was issued a number of patents regarding stylus design, some of which weren't filed until 1984. These ones will still be valid until 2004, and would presently be owned by GE or Thomson. The full patent descriptions are public documents that will be available at libraries with large government document sections. Here's a listing by patent number:

- 4,597,646 Apparatus for positioning a stylus
- 4,587,570 Stylus kicker having kick energy minimization means
- 4,574,306 Apparatus and method for automatically measuring the shoe-length of a video disc stylus
- 4,561,215 Stylus lapping control
- 4,560,853 Positioning and bonding a diamond to a stylus shank
- 4,557,040 Alignment and insertion apparatus for an information-containing disc stylus
- 4,536,238 Method and apparatus for aligning a chuck for holding an information containing disc stylus
- 4,532,737 Method for lapping diamond
- 4,516,232 Video disc player with compensation for stylus holder mechanical resonance

4,513,410 Pickup cartridge having stylus holder  
4,504,941 Stylus cartridge having stylus arm restraint  
4,502,135 Pickup cartridge having improved stylus flylead  
4,501,063 Stylus arm insertion apparatus  
4,490,945 Stylus manufacturing apparatus and method  
4,488,285 Stylus lifter locking mechanism for video disc player  
4,486,872 In-arm stylus cleaner for disc record player

Subject: Digest Entry  
Priority: normal

For auction:

Hope this goes out with the digest soon! The auction will run 7 days  
starting now! Thanks Tom!

I've been holding out on this item for some time, but I hope to move  
in January and am raising all the funds I can for the move. The item  
is original RCA part nm. 153331 'TOOL'. You use it to see if the  
wheel of your player is spinning right at 450 rpm like it should. I  
have put this item at EBAY auction web just to save time since they  
take care of bidding on things (it's an auction). If you aren't

familiar with EBAY, let me know. If you are, or you're not.. it's very simple at the URL to visit where you can read the description below, see the pictures, and put in a bid is:

<http://komodo.ebay2.com/aw-cgi/eBayISAPI.dll?ViewItem&item=2873830>

More description as listed on EBAY:

This is a neat little tool for those who are proud owners of an RCA or compatible CED movie disk player. It was used by technicians to make sure the platter was revolving at the correct speed. There are complete instructions for it's use included. Basically, you remove the cover from player, put in a disk, put the spindle wheel on top of the disk and start it playing. If the wedges on the disk don't move, the disk is spinning at 450 RPM (really fast compared to 33 1/3 eh?). If they appear to be turning clockwise or counter clockwise then the platter is spinning either too slow or fast. That's basically what it does. A very useful tool for someone still tinkering with an RCA player, or better yet, something neat to go along with your collection even if you aren't a guru of repairing forgotten technology.

Condition: The wheel and instructions are in excellent condition. The envelope they come however has been dog eared and ruffled some as seen in the scan.

Picture at:

Thanks!

p.s. Would also consider trades on this but only for CEDs on my top 5 most wanted list! I really need the money more!

TTYL,  
ZD

In a message dated 97-12-07 07:51:11 EST, you write:

<< Can somebody talk about something other than reviving the CED??? This is getting ridiculous. We all know why the CED failed and why they will

never start making CED's again..... Geeez.... Whatever happened to the good old days when people had discs to sell???? C'mon people this is turning into something similiar to the DAT group I subscribed to.... After a while all people wanted to do was create and sell bootleg tapes and not talk about the technology anymore..... >>

AMEN!!!!!! If I read one more posting asking for "MIB" on CED I'll quit subscribing to the CED Digest. I love RCA's terrible format for what it was and still is today...THE VIDEO EDSEL. Ford won't make you anymore Edsels and you're not getting any new CED movies either. What's the point? The fun of CED is that it is DEAD. Same reason I like LPs and 8-tracks, hell I NEVER buy new stuff on LPs.

Tony

-and don't bombard me with hate mail, it'll only further cement my position on this subject.

From: Tom Howe  
To: ceds@teleport.com  
Subject: SelectaVision Holotape  
Mime-Version: 1.0

Hello All:

I've been asked to question, "How is it possible to record video on Saran Wrap?", which in thicker form was the material used in RCA's early Holotape format. RCA dumped the Holotape format in the development stage in favor of CED for unerasable storage, and MagTape for erasible storage, with MagTape eventually being dumped in favor of VHS. The following article published 28 years ago in Spectrum was recently posted to the Dead Media list, and provides a good explanation of how HoloTape worked:

Source: "Color TV tape player employs lasers and holography"  
IEEE Spectrum 6 (Dec 1969): page 28

"A laboratory model of a low-cost television color tape player built around lasers and holography and destined for home use in the early 1970s was exhibited

recently by RCA. In commercial form, the SelectaVision player, which will be designed to attach to any standard color television set, will play full-color programs recorded on tapes made of the same clear, inexpensive plastic materials used in super-markets to wrap meats.

"These tapes will be scratch proof, rustproof, and virtually indestructible under normal use. The conversion process is described as follows: a color program originating from a color television camera or color videotape player is recorded on conventional film by means of an electron beam recorder. This film, known as the color encoded master, is then developed and convened by a laser to a series of holograms recorded on a plastic tape recorded with photoresist, a material that hardens to varying degrees depending upon the intensity of the light striking it.

"Next, the tape is developed in a chemical solution that eats away the portions of the photoresist not hardened by the laser beam. The result is a relief map of photoresist whose hills and valleys, and the spacing between, represent the original color television program in coded form. This is called the hologram master.

"The hologram master is plated with a thick coating of nickel and stripped away, leaving a nickel tape with the holograms impressed on it like a series of engravings. This is the nickel master.

"Finally, by feeding the nickel master through a set of pressure rollers along with a transparent vinyl tape of similar dimensions, the holographic engravings on the master are impressed on the smooth surface of the vinyl as holographic reliefs. The result is a SelectaVision program tape ready for home use.

"Playback of such a tape requires only that the beam from a very-low-power laser pass through it into a simple, low-cost television camera that sees the images reconstructed by the laser directly, and their colors as coded variations in those images. The playback mechanism, the laser, and the television camera are all housed in the SelectaVision player, which is attached to the antenna terminals of a standard color television set for actual viewing."

I think that this newsletter is a great idea. RCA ran out on us in 1984 while the Lazer Disc crowd cheered. Now DVD is doing the same to them. Will we never learn?

Somebody in Mexico or Taiwan should start making the players again.

>Tony

Allright, someone that agrees with me!!!! Keep the CED dead!!!!.... If anyone does bring it back I will be amazed..... However, I would like to start the committee to bring back the Ford Edsel..... We could get all of the information from Ford and and start mass producing the Ford Edsel.... Yah!!!! Who's with me on this??? Look, If we all pitch in \$100.00 we can bring back the Ford Edsel!!!!..... Okay, I'm just joking..... gosh....

Why doesn't someone try to revive mechanical television???? There's an idea.... Better yet, we could start the committee to go back to 60 line television instead of 525 lines!!!! Y'know, things were a lot better back in those days.... Who needs HDTV????

Later,

Dave.

-BTW - My Benji CED is still playing fine with no lubricant on the disc whatsoever..... I'll let the site know when this CED fails..... My test to find out if the lubricant is really necessary continues..... The disc has been played at many different times without lubricant for over 6 months now.....

Subject: Re: CED Digest Vol. 2 No. 51  
MIME-Version: 1.0

We'll If I recall correctly, The Digest intent and purpose statement header in the Digest format states that the Digest is for the use of CED'ers to Buy, Sell, Trade, and get Technical and Repair advice.

Just because the Digest will not contain everything I would personally would like to see "Discussed" or talked about, I myself will not give Ultimatums, or Threats like some people on this page say, for instance and I quote, "If I read one more posting asking for "MIB" on C.E.D. I'll quit subscribing to the C.E.D. Digest". Ofcourse, If some party's feel it causes them such "Anxiety" maybe they shouldn't subscribe.

I do wonder this however? "Where are all the people at right now who got all this started at??? I only see other persons who did not get the issue or subject started raking it throught the Coals. It seems the persons who got this started are no where to be found at the moment??

Some also point out other tastes and Preferences of what they consider something worth bringing back, for example, "I would Like to start the committe to bring back the Ford Edsel".

As for the Ford Edsel, It falls victum to the same difficulties as the C.E.D. format and that is, "How do you get something repaired with it, when it breaks down?". Which brings me to my posting for this Digest::

So, lets start out with one of the things that Tom intended the Page to be used for: Repair and Technical advice;

-Question No.#1

Tom, when a J-series player has a picture that shakes Horizonatly (picture jitter) is it realated to the motor under the plater?? another words is that problem solved by replacing the coil assembly under the base underneath??? is this achieved by replacing that assembly, or is there an electronic adjustment on the Mother Board??

Technical Question No.#2 Tom, what causes a picture on a J-series Model to fold near the top of the picture? where it gets kinda white tinted in the picture and the picture twists and distrots?? and inaddition to that the Stepper motor which advances the Play Arm alternates between trying to run forward and reverse back unable to make up its mind as to which direction to advance the Player Arm???

I figured that these questions fall within the scope of the intent of the Digest.

See guys, this is something that is important to know for your "DEAD COLLECTIONS as you guys put it so well in your e-mails. The only point your over looking is that if your machines Die then Your collection will

REALLY BE DEAD THEN! as you put it so well.

So, using this as a "Start Back in the Right Direction" as you guys put it, We can get some tech Advice.

Thanx

Mark.....

I was curious what David Potochick was referring to when he said he was testing his Benji CED to see how long it would play without lubricant. What lubricant is he talking about? Am I supposed to be using lubricant on my CED's? I'd appreciate more information on the lubricant and what purpose it's supposed to serve. Thanks, George

I just gotta say to the guy testing the "Benji" disc- I don't think I could stand watching it that many times!! The one time I watched mine it was fun to look at the 70's stuff, and the bad pan-and-scan job from the 1.85 frame, and the smearing. I could watch it one more time soon, but not much more unless someone gives me a list of mistakes or inside jokes in the film or stuff like that.

BTW have you ever seen the original transfer of "Network"? I have it on both VHS and CED and it's got "SMEAR" written all over it!! So much it's hard to watch the movie! It runs a few minutes over 2 hours, and the currently available laserdisc is on 2 discs (Thanks MGM for having mercy on fans of this movie and re-doing the transfer!) The CED however is a single disc and is time-compressed (master run at slightly faster speed) not only to fit on one disc, but also to make room for 3 "previews" at the end- the only time I've seen previews on a CED movie! For those curious, it has this cheesy music with the words "Also available from MGM/CBS Video" and has what looks like a trailer for a "Wizard of Oz" reissue, and very short spots for "2001" and "Fame", I'm certain "Fame" is a TV commercial but not sure about 2001, it's only about 15 seconds.

Subject: New RCA VideoDisc Classifieds URL  
Mime-Version: 1.0

Hello All:

If you have had the RCA VideoDisc Classifieds bookmarked, the old URL now takes you to a generic page instead of the specific VideoDisc classified page. The EPage Classified Service had a disk crash, and required the affected categories to be recreated. Here's the new URL, which can also be loaded from [www.cedmagic.com](http://www.cedmagic.com):

<http://ep.com/ep/csp.html?csp=1064>

Any classifieds that were at the site when the crash occurred will need to be placed again. More details on the crash can be found at this URL:

<http://ep.com/b/crash.html>

Hello all,

First off - Hapy Holidays.

Second - I have been getting a large number of requests for "Dot and the Kangaroo" by people who have no idea what CEDs are and I am curious as to why.

Any one have any answers? Also, if I made VHS copies of these for these people what holy legal hell would I be getting myself into?

Thanks

-Marlin
